

**20TH AIM INTERNATIONAL WORKSHOP, TSUKUBA, JAPAN, JANUARY 23-24 2015**

## **Proposal of a Low Carbon City study for Haiphong, Vietnam**

**Nguyen Thai Hoa**

**Program-Specific Researcher in Kyoto University, Japan**

Haiphong is known as the third largest city of Vietnam and a largest ocean port in the North and has an important position in economy development strategy of Vietnam government. As part of Viet Nam Green Growth Strategy 2011-2020 and under the Conclusion No.72-KL/TW, Haiphong is taking the lead in awareness raising and taking action to become the first "Green Port City" in Viet Nam by 2020. Haiphong city need to promulgate actions and plans to concretize that idea of Green Port City. We expect this study is useful for researchers and policy makers in Haiphong who are interested in developing Haiphong as a Green Port City. The study is conducted based on collaboration among AIM team (KU, NIES, IGES and MHIR), ISPONRE and Haiphong side. The objectives of this poster are to show an introduction of the Haiphong Low Carbon City (LCC) study, preliminary result, schedule to conduct the study, task force members and expected achievement in this collaboration study.
