

Model for Future Scenario Development

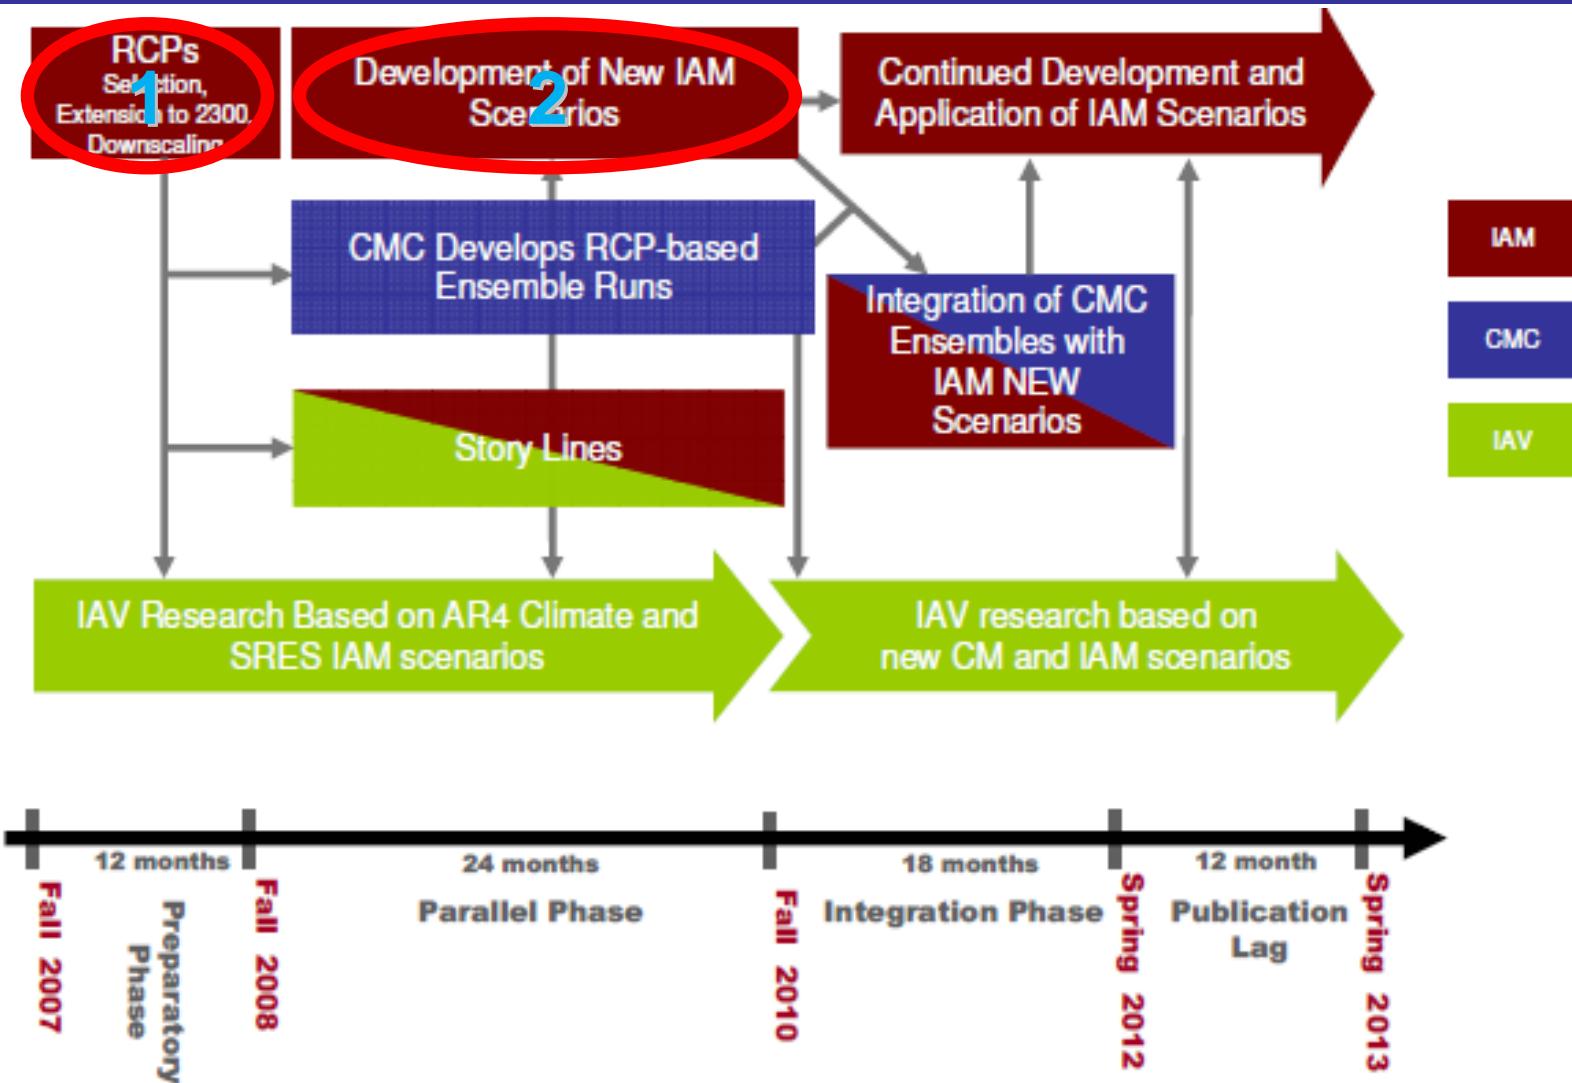

Toshihiko MASUI
National Institute for Environmental Studies

**The 13th AIM Workshop
Ohyama Memorial Hall, NIES
16-18 February 2008**

This presentation is supported by Dr. Kainuma, Dr. Hijioka, Dr. Kinoshita,
Dr. Nozawa, Dr. Ishiwatari, Ms. Nishimoto, and Prof. Matsuoka.

Schedule of IPCC new scenario development

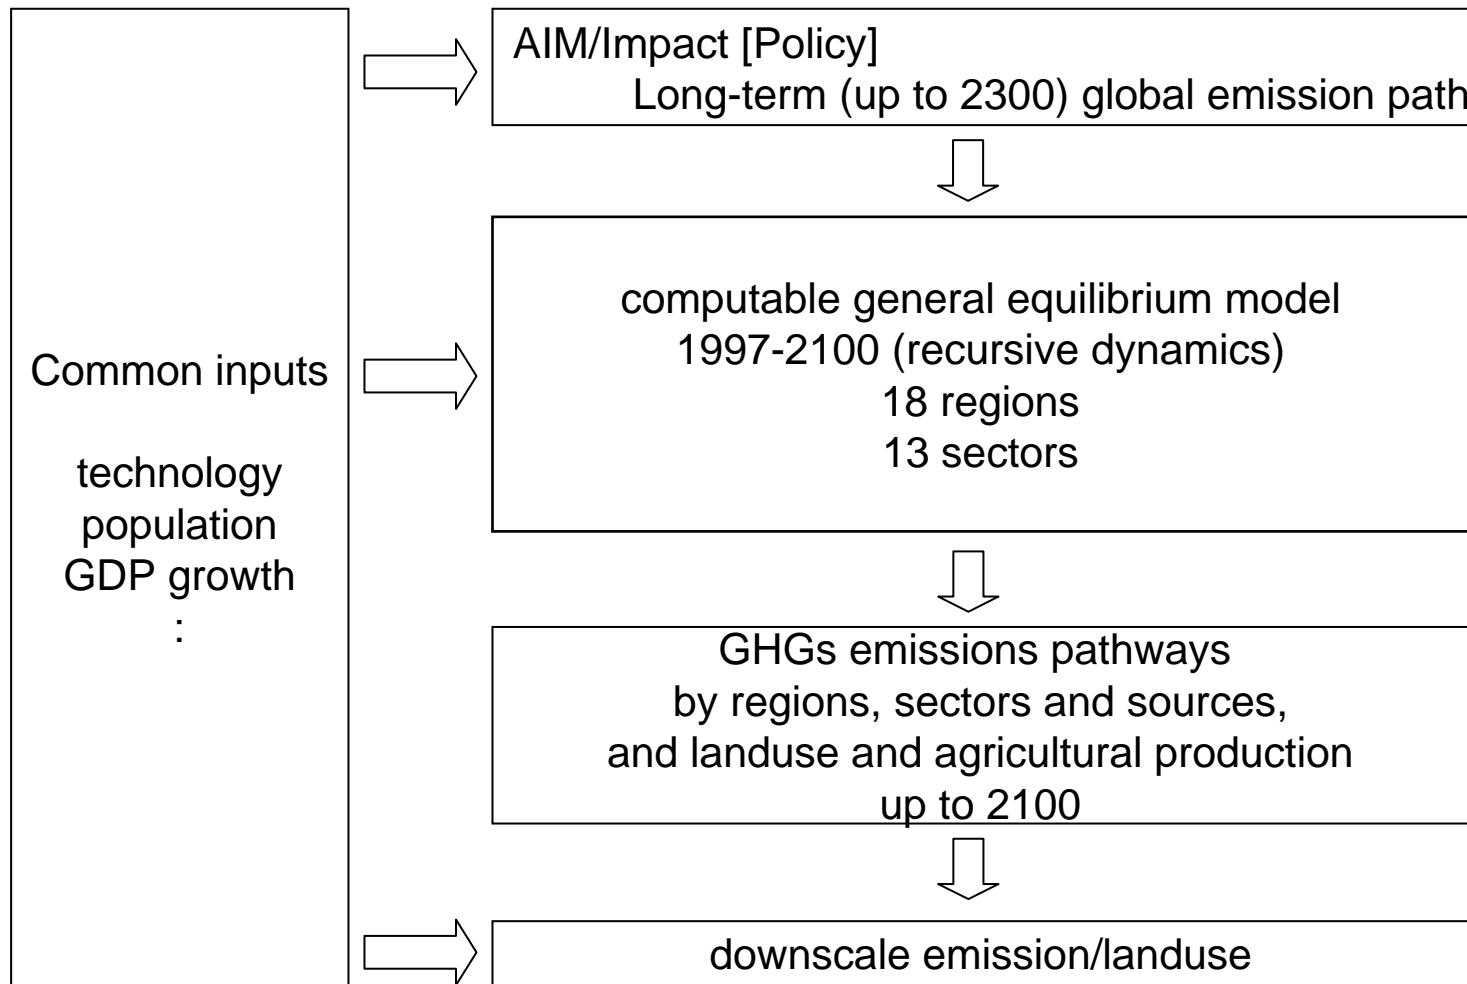

1. RCP (Representative Concentration Pathway)

- Results will be input to the climate models.
- Emissions up to 2300 following 2.9 (or 2.6), 4.5, 6 and 8.5 W/m² will be estimated.

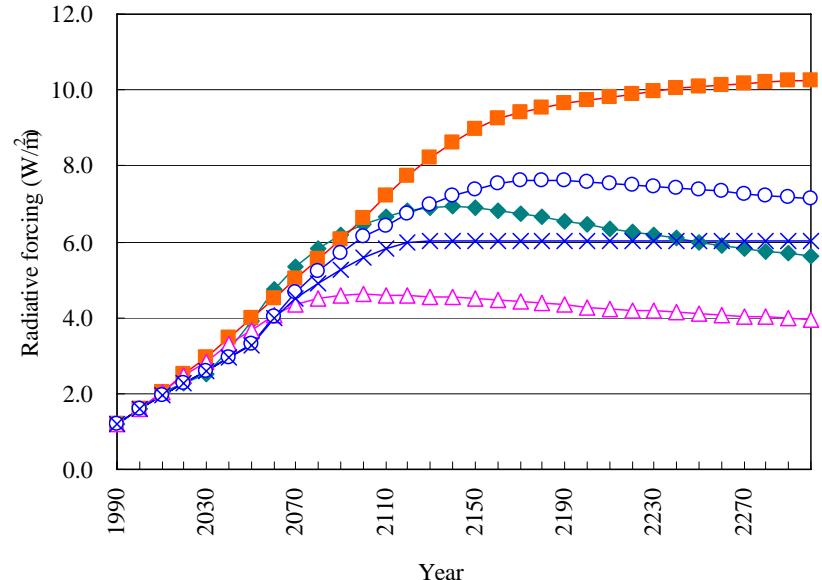

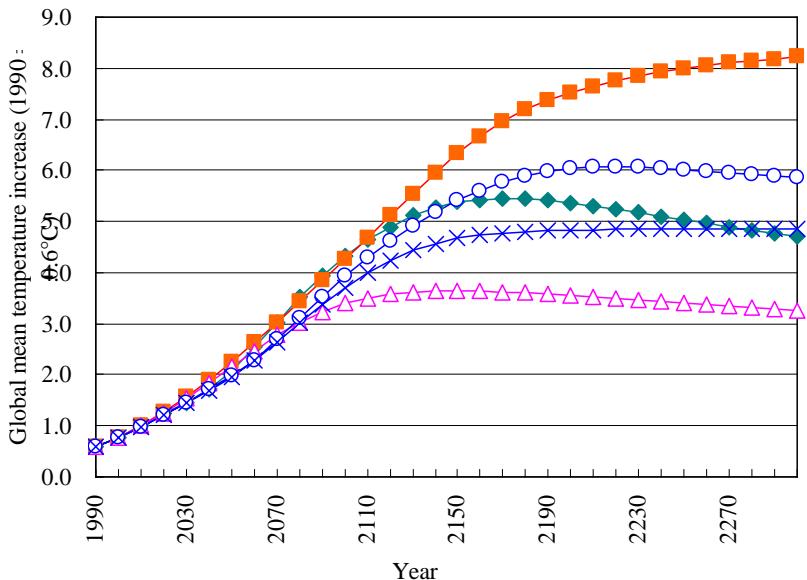

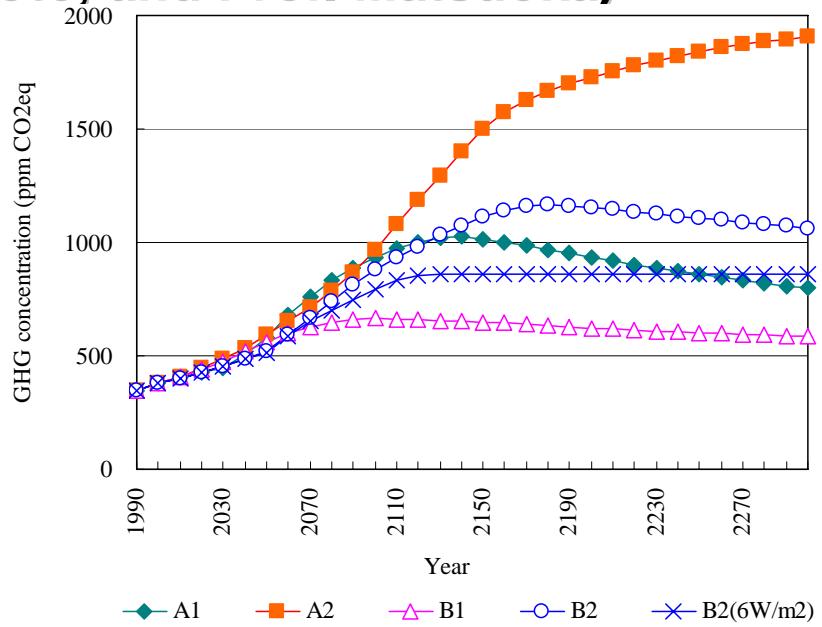

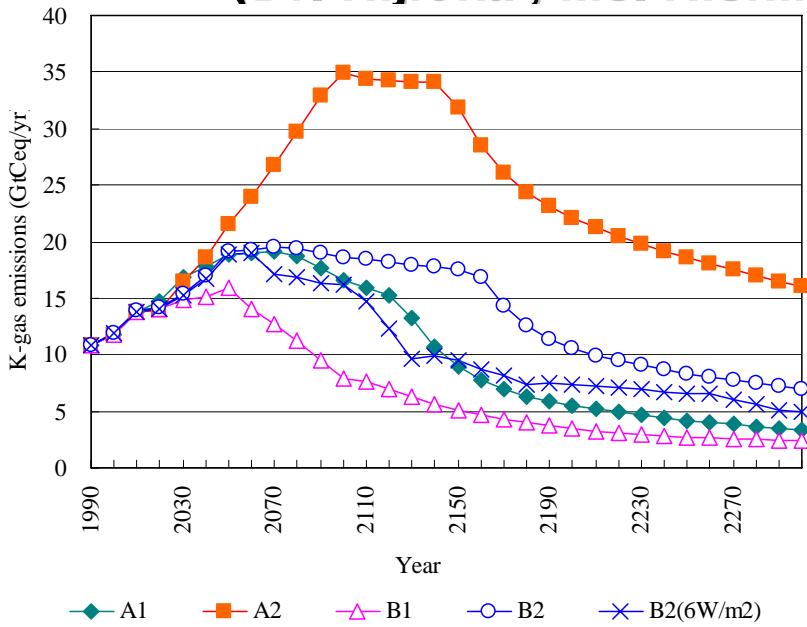

Variable	Units	Spatial scale	
<i>Greenhouse gases</i>		Concentrations	Emissions
CO ₂ (fossil fuel, industrial, land-use change)	ppm and Pg/yr	Global average	Sum
CH ₄	ppb and Tg/yr	Global average	≤ 1° x 1°
N ₂ O	ppb and Tg/yr	Global average	≤ 1° x 1°
HFC's	ppb and Tg/yr	Global average	Sum
PFC's	ppb and Tg/yr	Global average	Sum
CFC's	ppb and Tg/yr	Global average	Sum
SF ₆	ppb and Tg/yr	Global average	Sum
<i>Aerosols*</i>			
Sulfur (SO ₂)	Tg/yr	Generated by ESM	≤ 1° x 1°
Black Carbon (BC)	Tg/yr	Generated by ESM	≤ 1° x 1°
Organic Carbon (OC)	Tg/yr	Generated by ESM	≤ 1° x 1°
<i>Chemically active gases*</i>			
CO	Tg/yr	Generated by ESM	≤ 1° x 1°
NO _x	Tg/yr	Generated by ESM	≤ 1° x 1°
VOC's	Tg/yr	Generated by ESM	≤ 1° x 1°
NH ₄	Tg/yr	Generated by ESM	≤ 1° x 1°
<i>Land-use & land cover</i>			
CO ₂ flux (land-use change)	Tg/yr	n/a	≤ 1° x 1°
Land-use & land cover	Fraction of types		≤ 1° x 1°

Methodology for RCP

Results from AIM/Impact [Policy]

(Dr. Hijioka , Ms. Nishimoto, and Prof. Matsuoka)

AIM/Ecosystem for RCP

- Global computable general equilibrium model
- 1997-2100 (recursive dynamics)
- Base data: GTAP 5 and IEA energy balance table
- 18 regions
- 13 sectors
- Treated GHGs: CO₂, CH₄, N₂O, HFC*, PFC*, CFC*, SF₆*, SO_x, BC, OC, CO, NO_x, NMVOC, NH₃
 - *: given as scenario
- Emission sources: fossil fuel combustion and activity
- Simulations: 6W/m² case

Definition of region and sector

18 regions

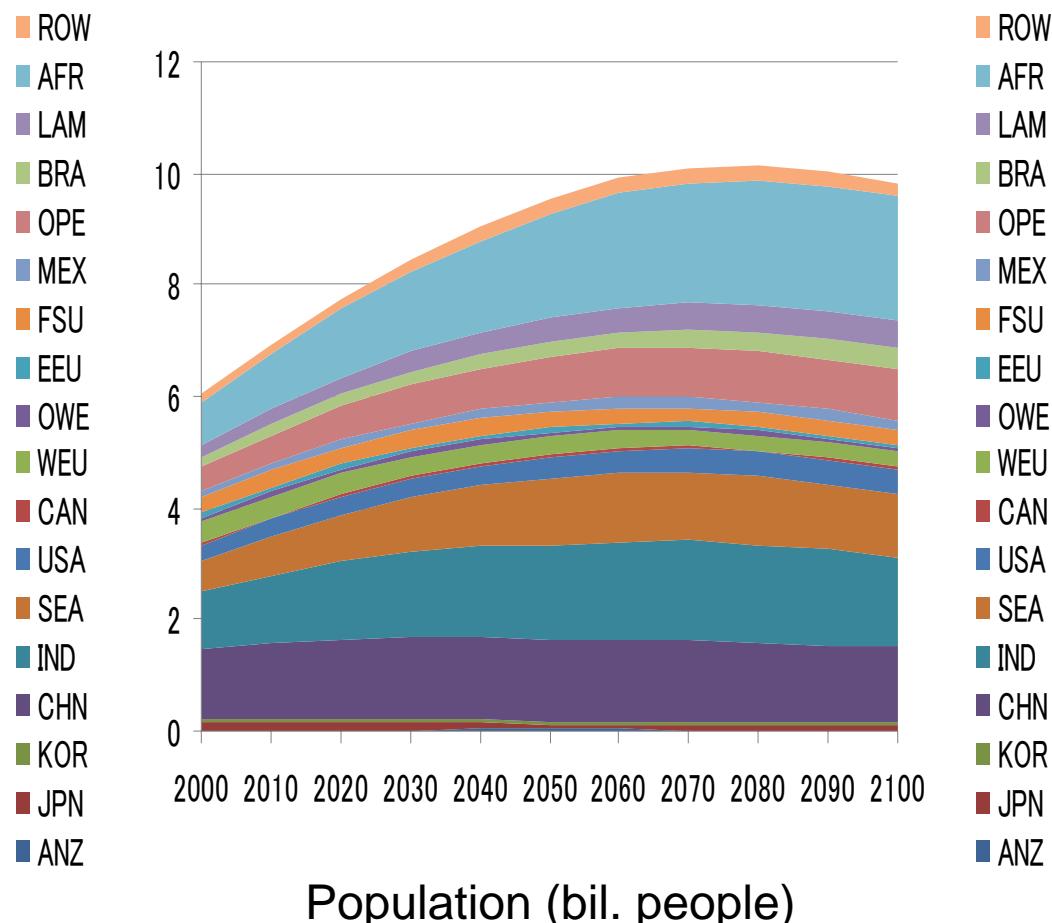

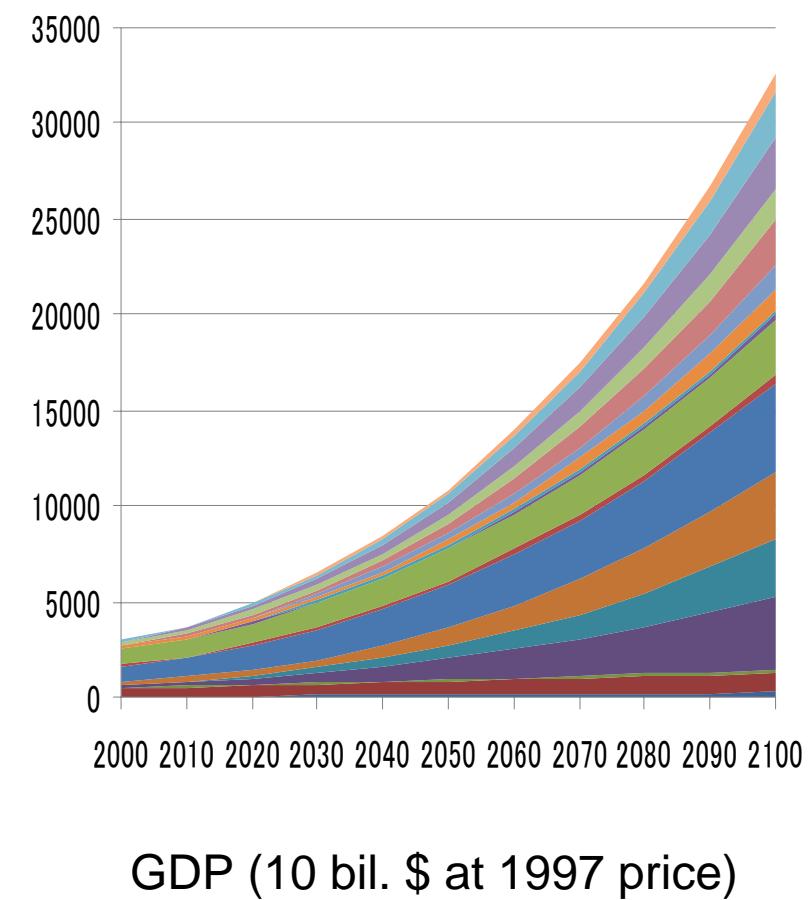

ANZ	Australia/NZ
JPN	Japan
KOR	Korea, Rep.
CHN	China
IND	India
SEA	South & SE Asia
USA	USA
CAN	Canada
WEU	EU-15
OWE	Other Western Europe
EEU	Eastern Europe
FSU	FSU
MEX	Mexico
OPE	OPEC
BRA	Brazil
LAM	Latin America
AFR	Africa
ROW	Rest of the World

13 sectors

GAS	Natural gas works
ELE	Electricity and heat
OIL	Refined oil products
COL	Coal transformation
CRU	Crude Oil
EII	Energy Intensive Industry
AGR	Agriculture
LVK	Livestock
FRS	Forestry
FSH	Fishing
OIN	Other Industry
TT	Transport
SER	Service

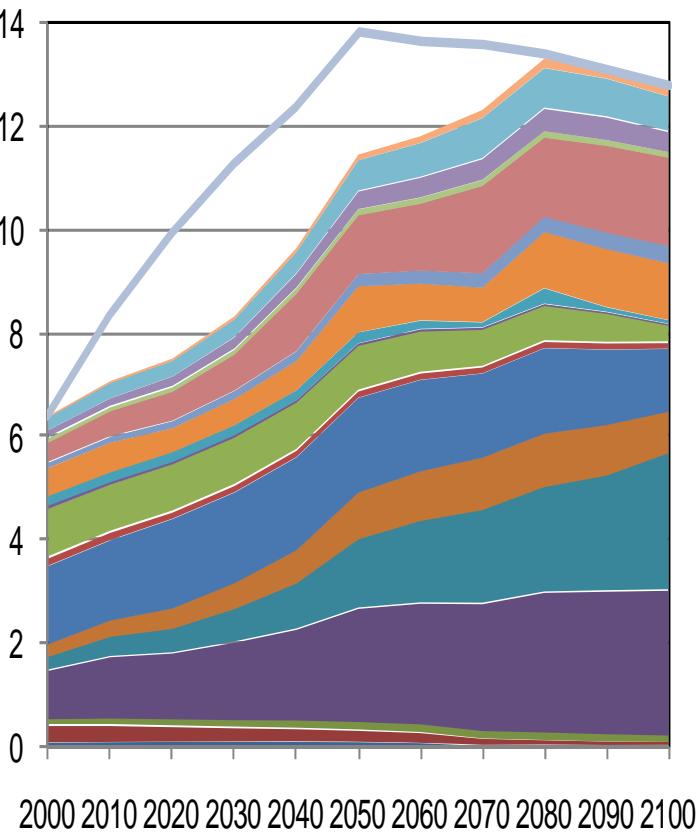

GDP and population

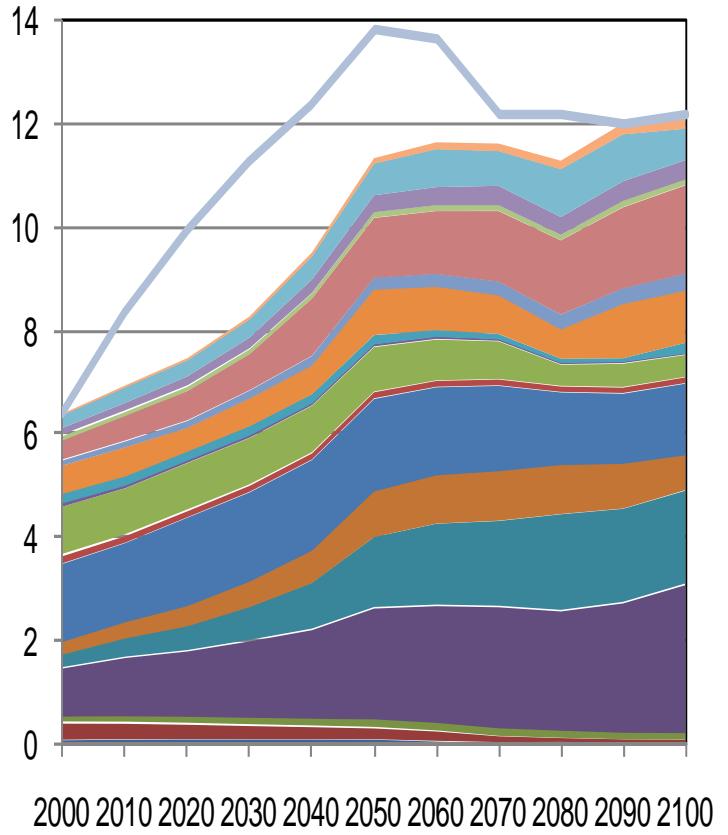

CO2 emissions (excluding natural source)

GtC

reference

GtC

From fossil fuel

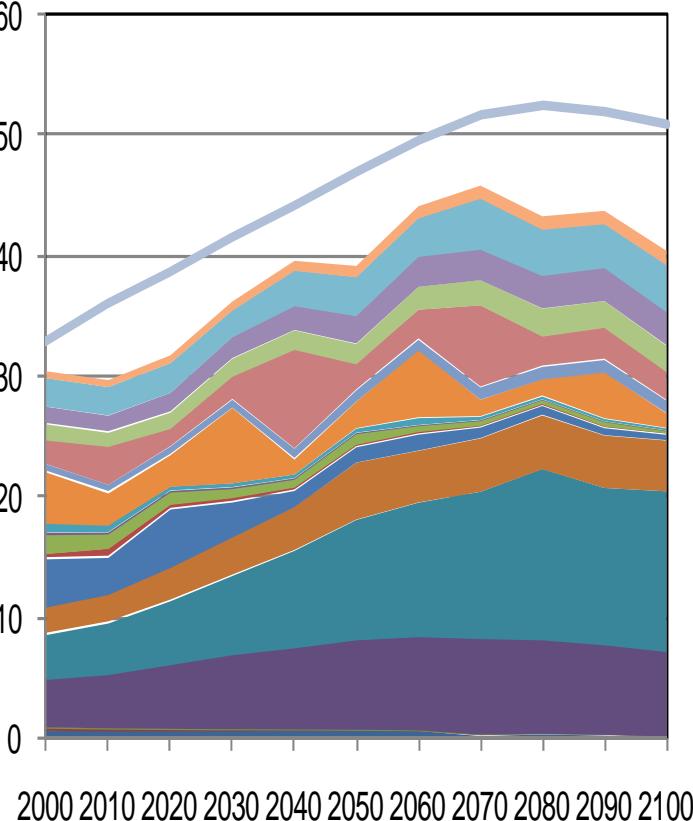

6W/m²

- ROW
- AFR
- LAM
- BRA
- OPE
- MEX
- FSU
- EEU
- OWE
- WEU
- CAN
- USA
- SEA
- IND
- CHN
- KOR
- JPN
- ANZ
- lim_assum

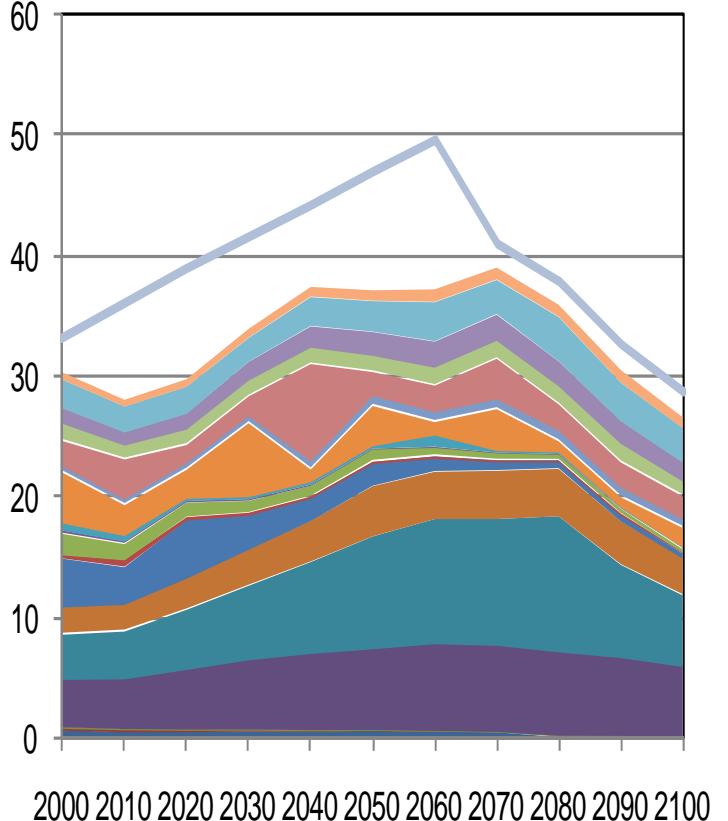

CH4 emissions (excluding natural source)

10 Mton

reference

10 Mton

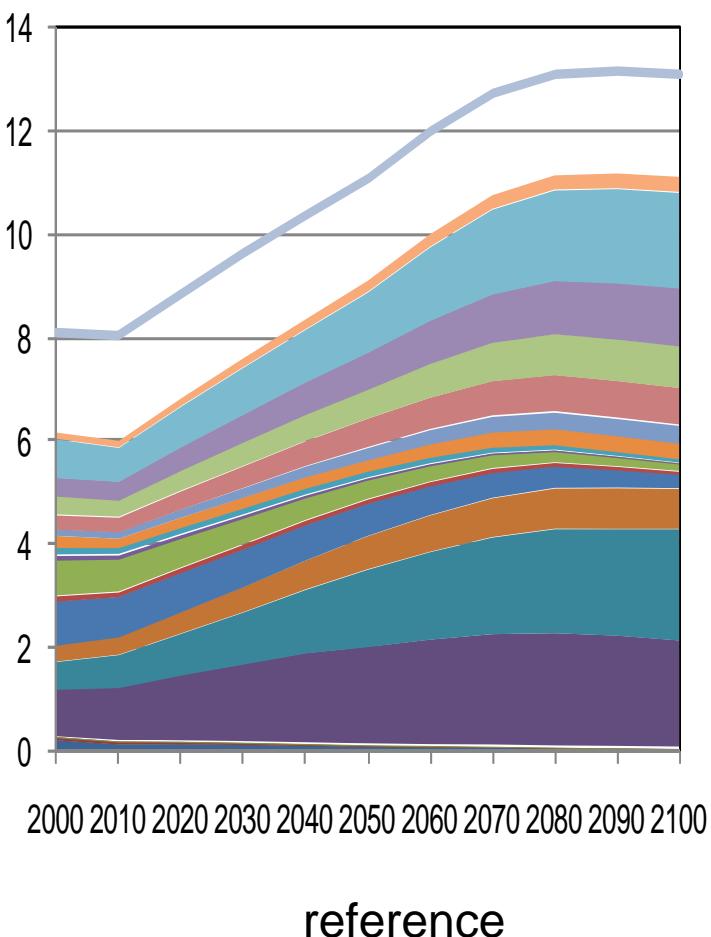

6W/m²

- ROW
- AFR
- LAM
- BRA
- OPE
- MEX
- FSU
- EEU
- OWE
- WEU
- CAN
- USA
- SEA
- IND
- CHN
- KOR
- JPN
- ANZ
- lim_asum

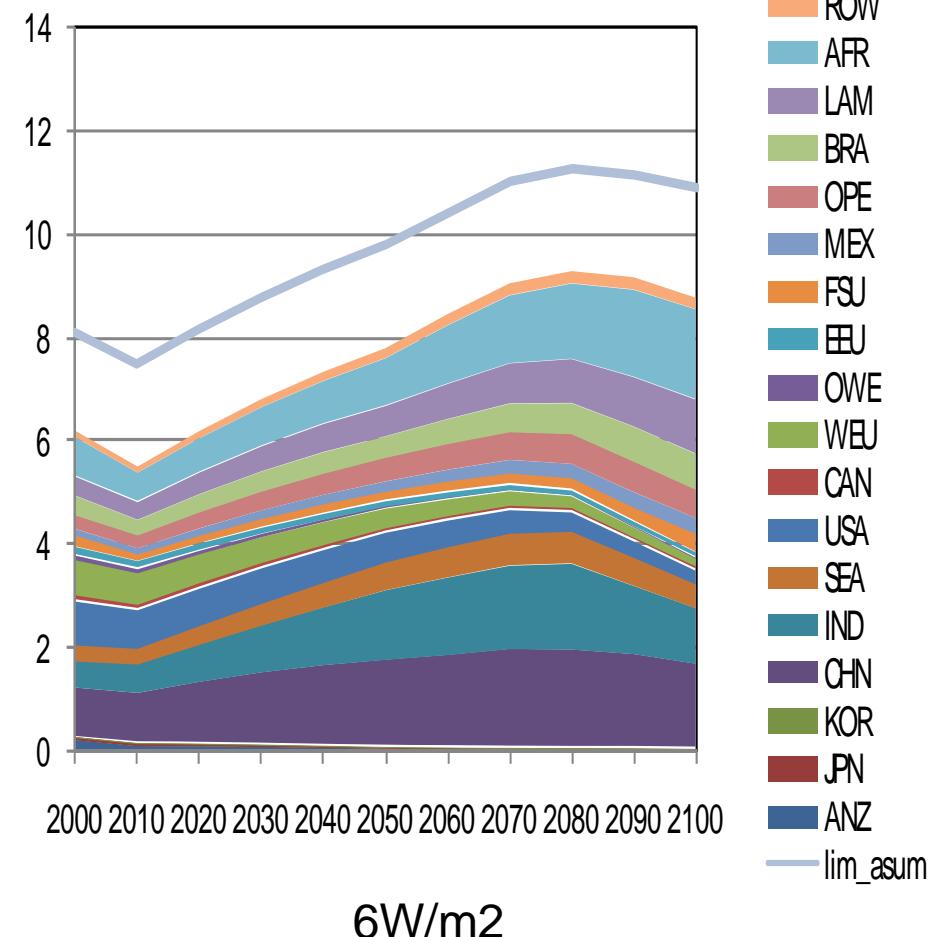

N2O emissions (excluding natural source)

Mton N

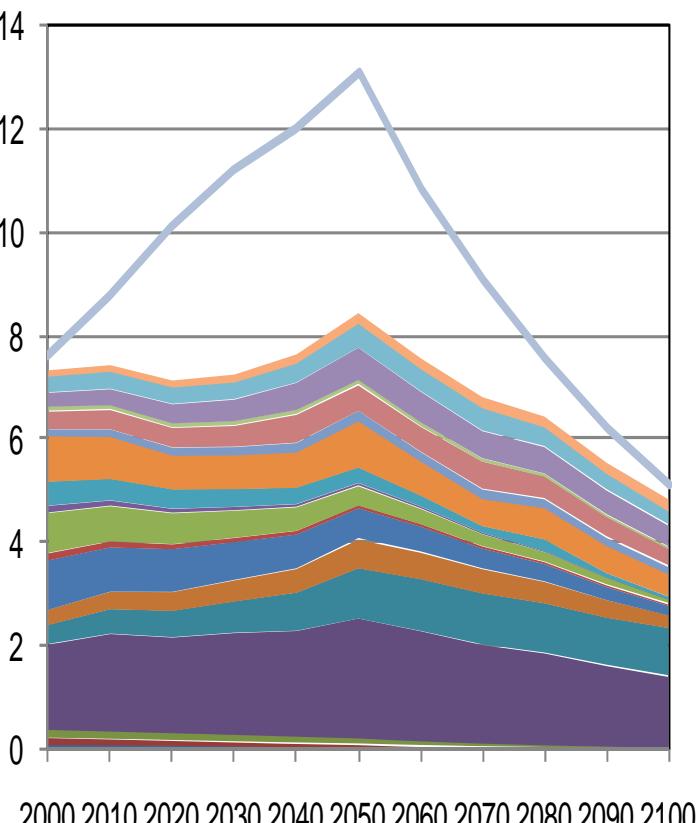

Mton N

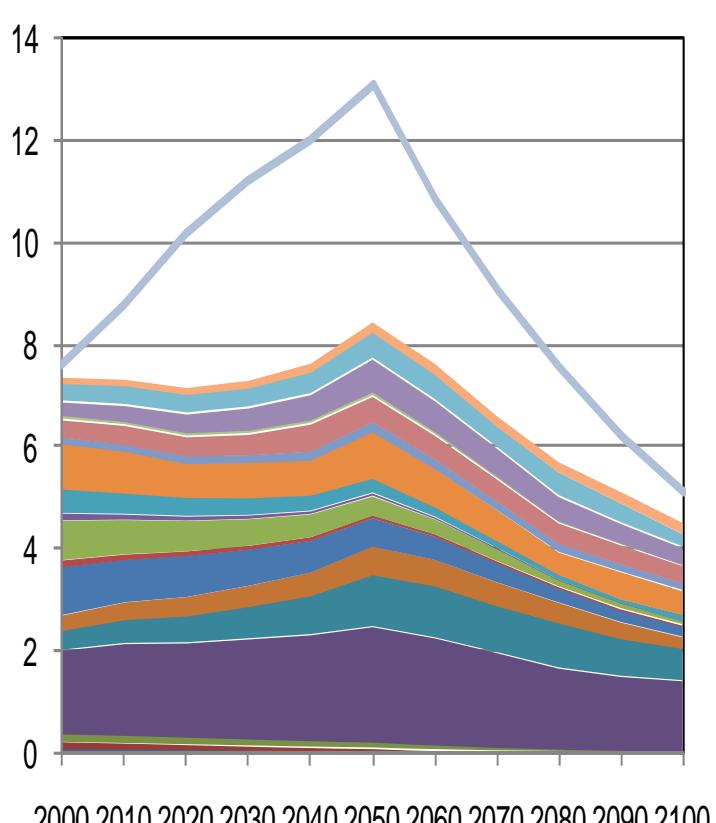

SOx emissions (excluding natural source)

10 Mton S

reference

10 Mton S

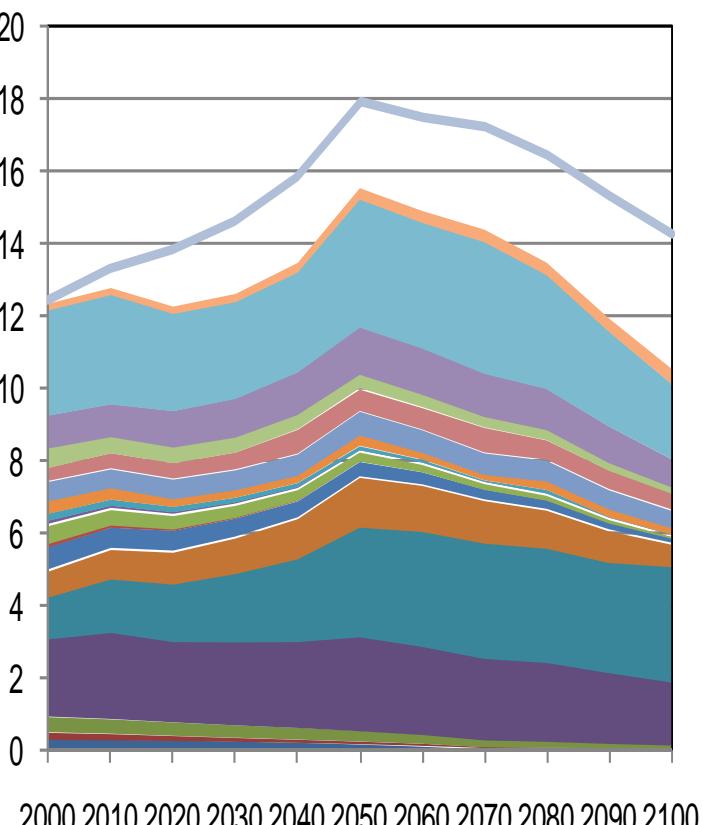

6W/m2

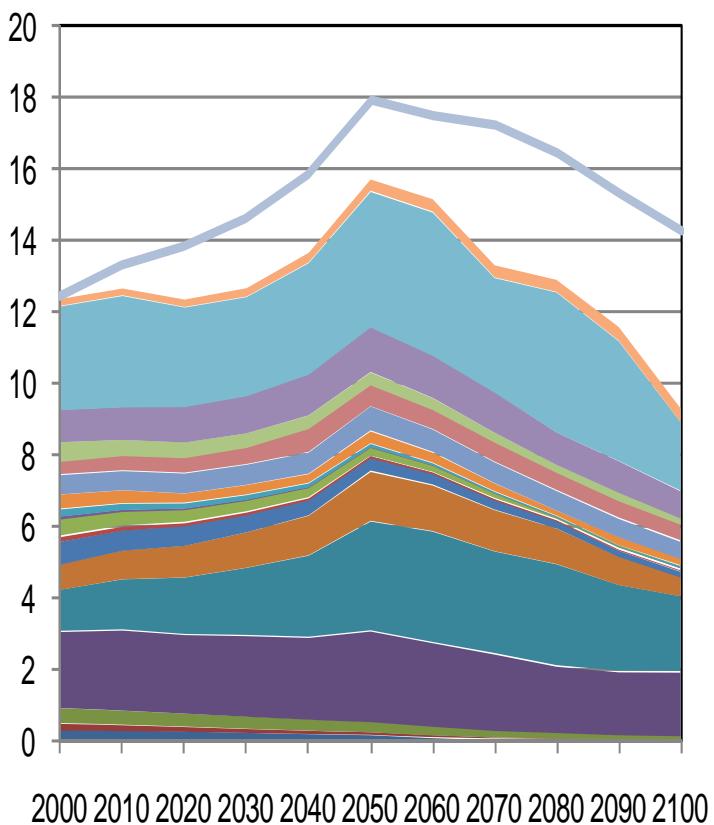

BC emissions

Mton

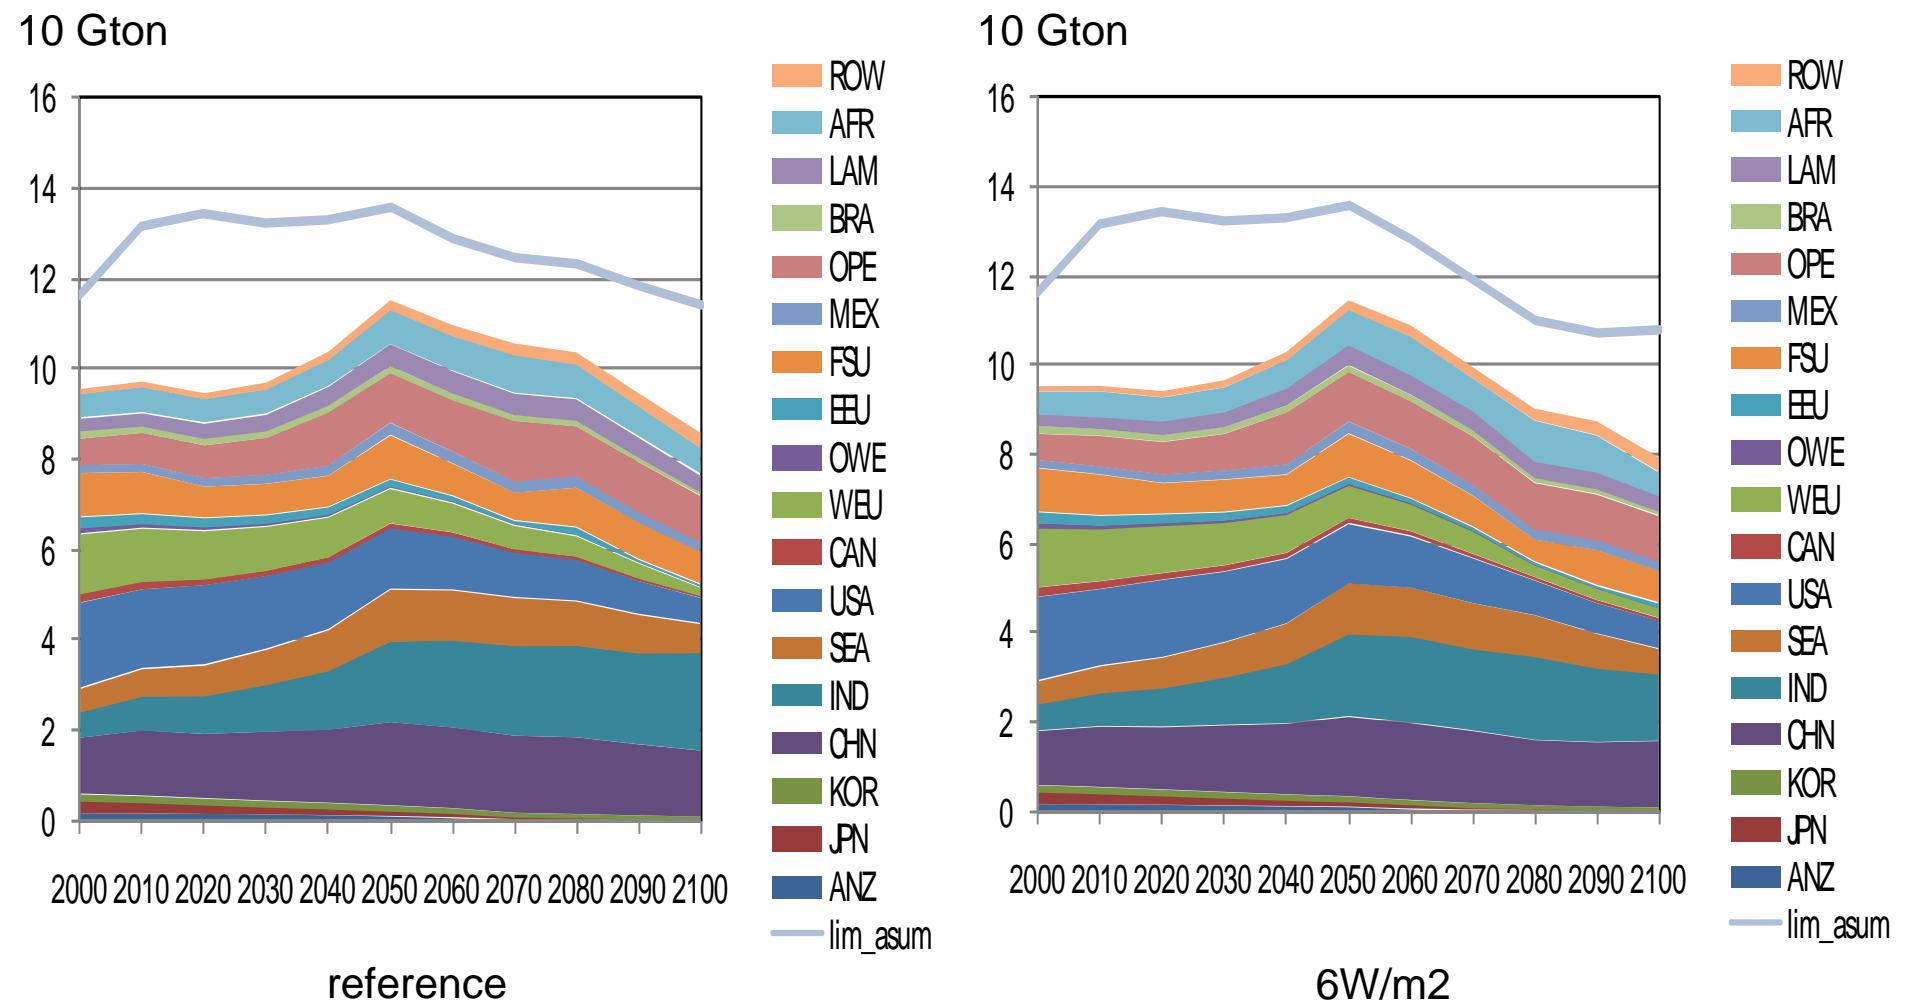

reference

Mton

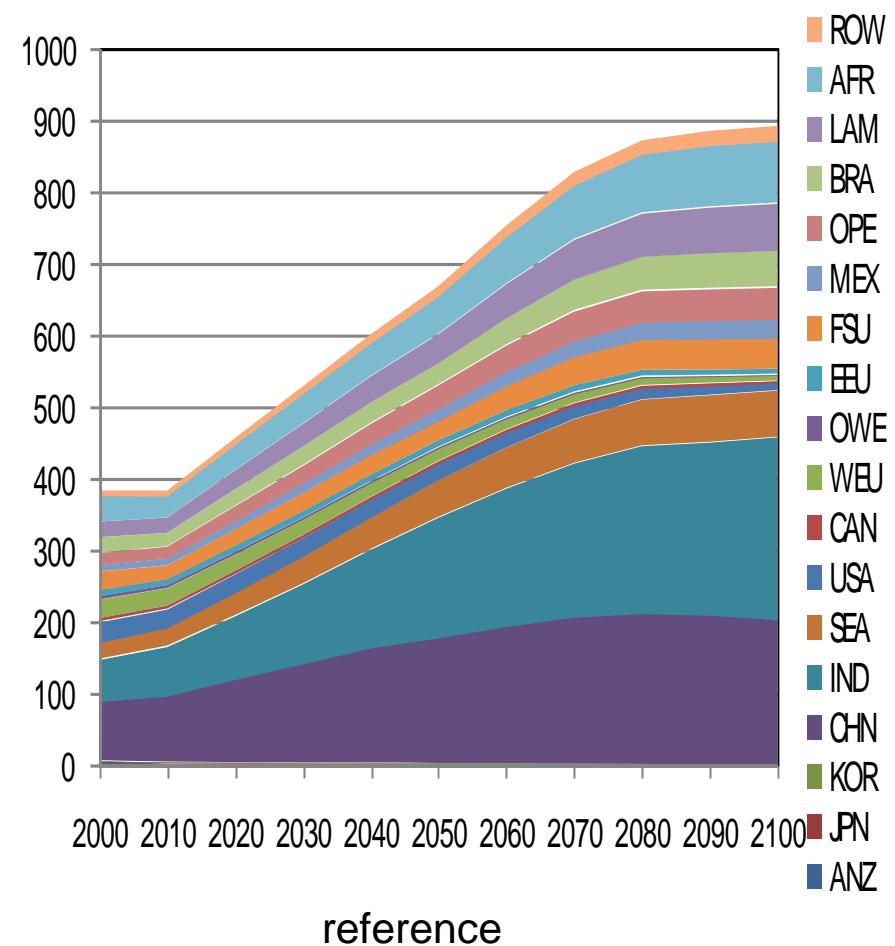

6W/m2

NOx emissions

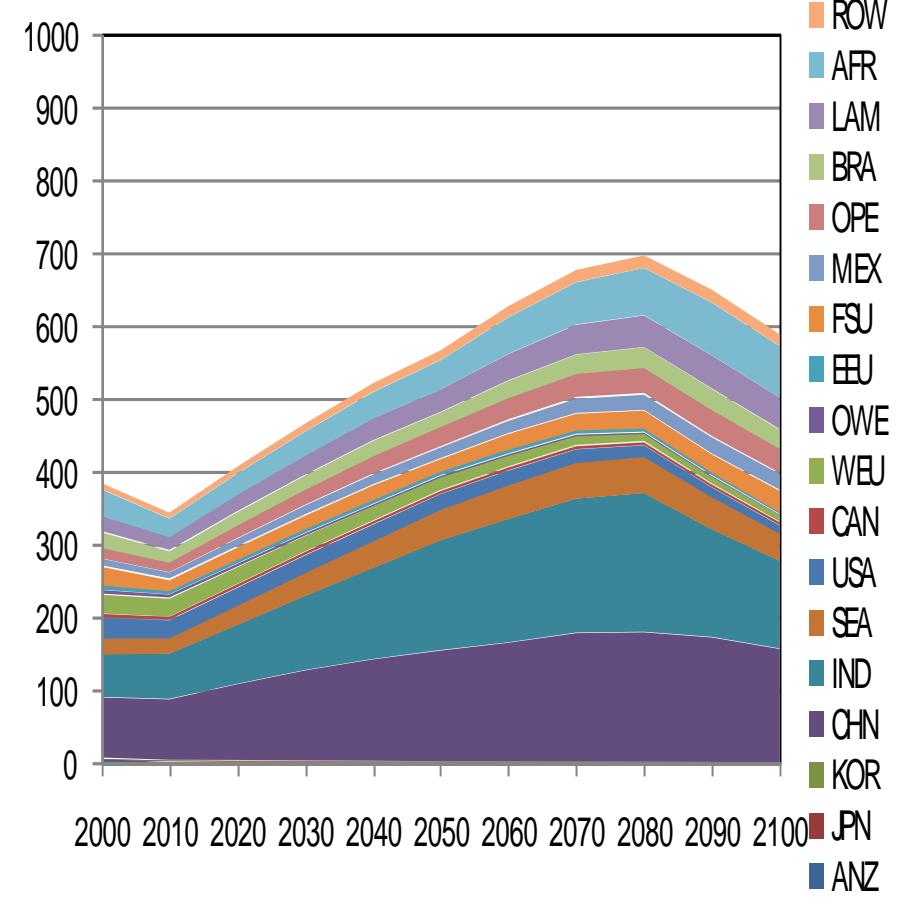

NH₃ emissions

100 Gton NH₃-N

10 Gton NH₃-N

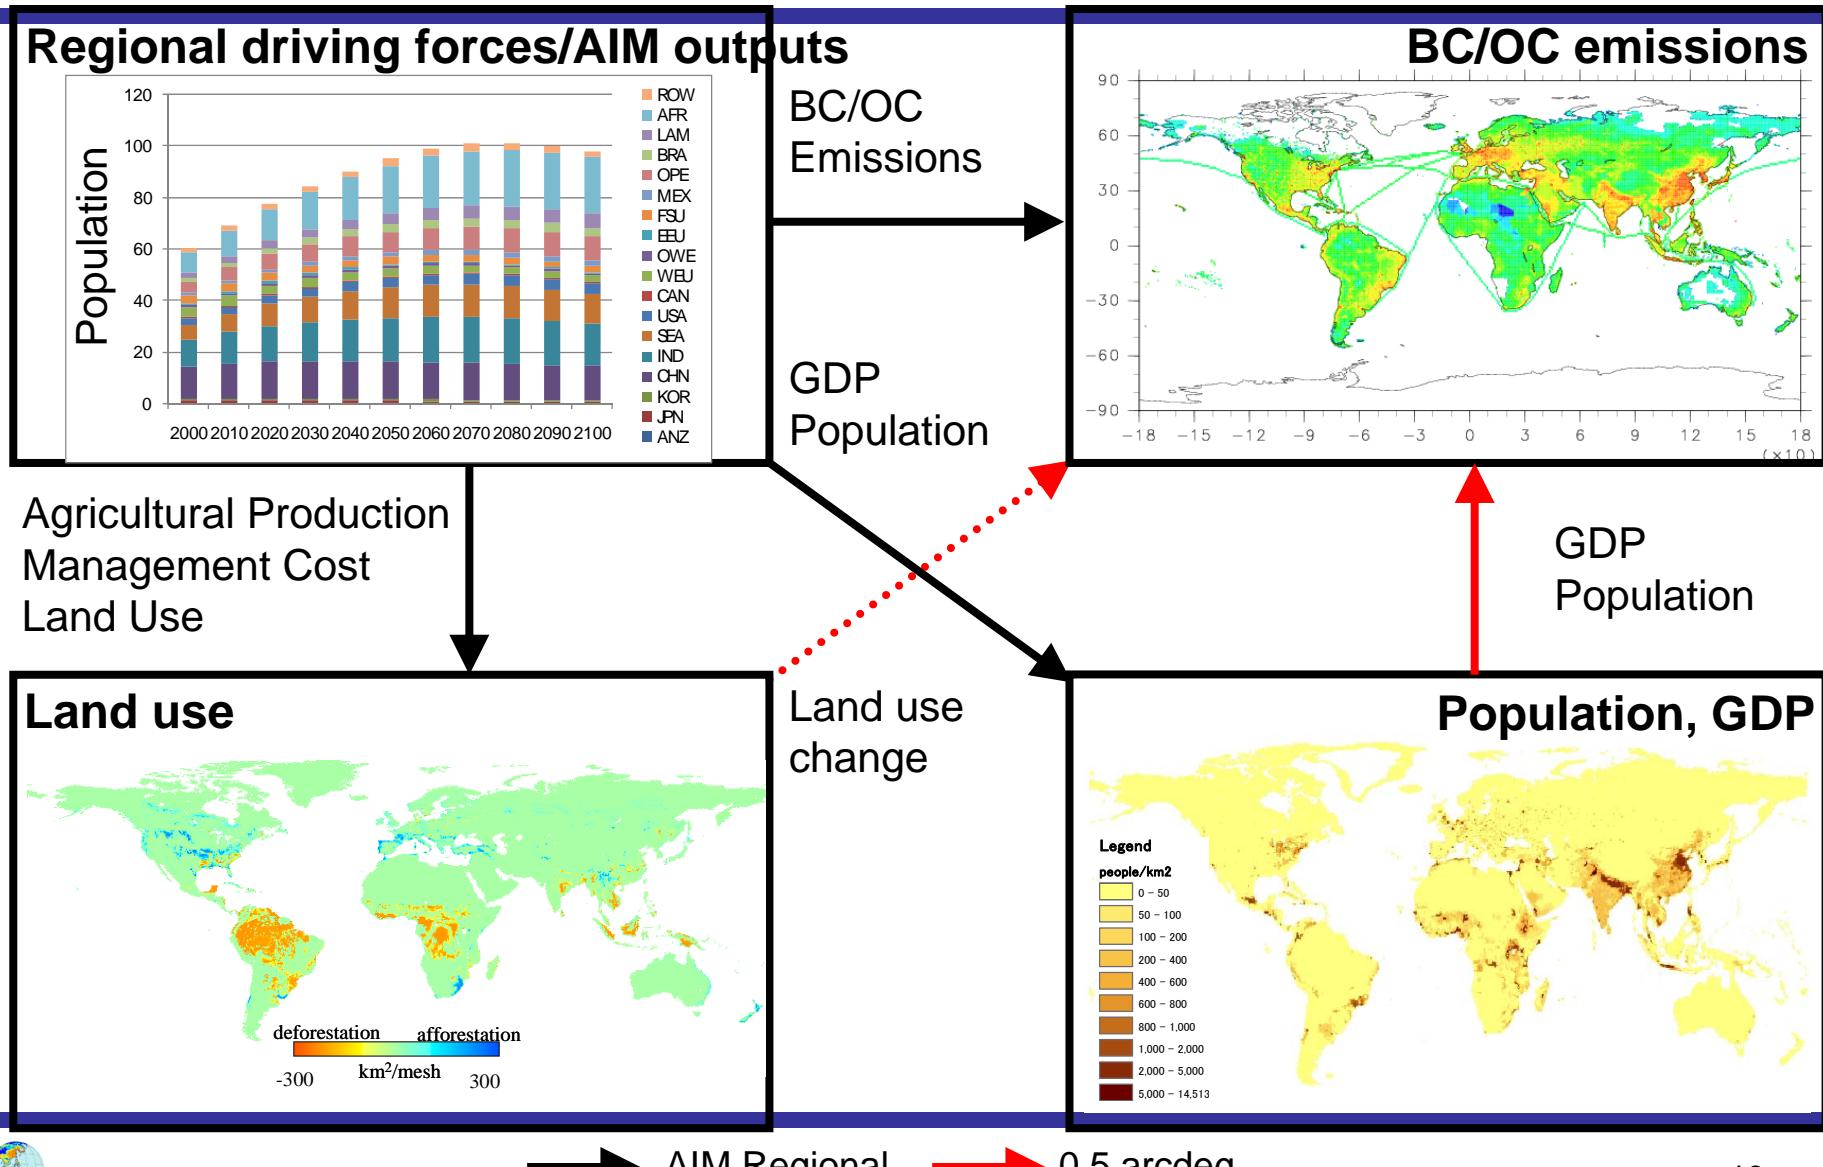

reference

6W/m²

Schematic diagram of downscaling

(Dr. Nozawa and Dr. Ishiwatari)

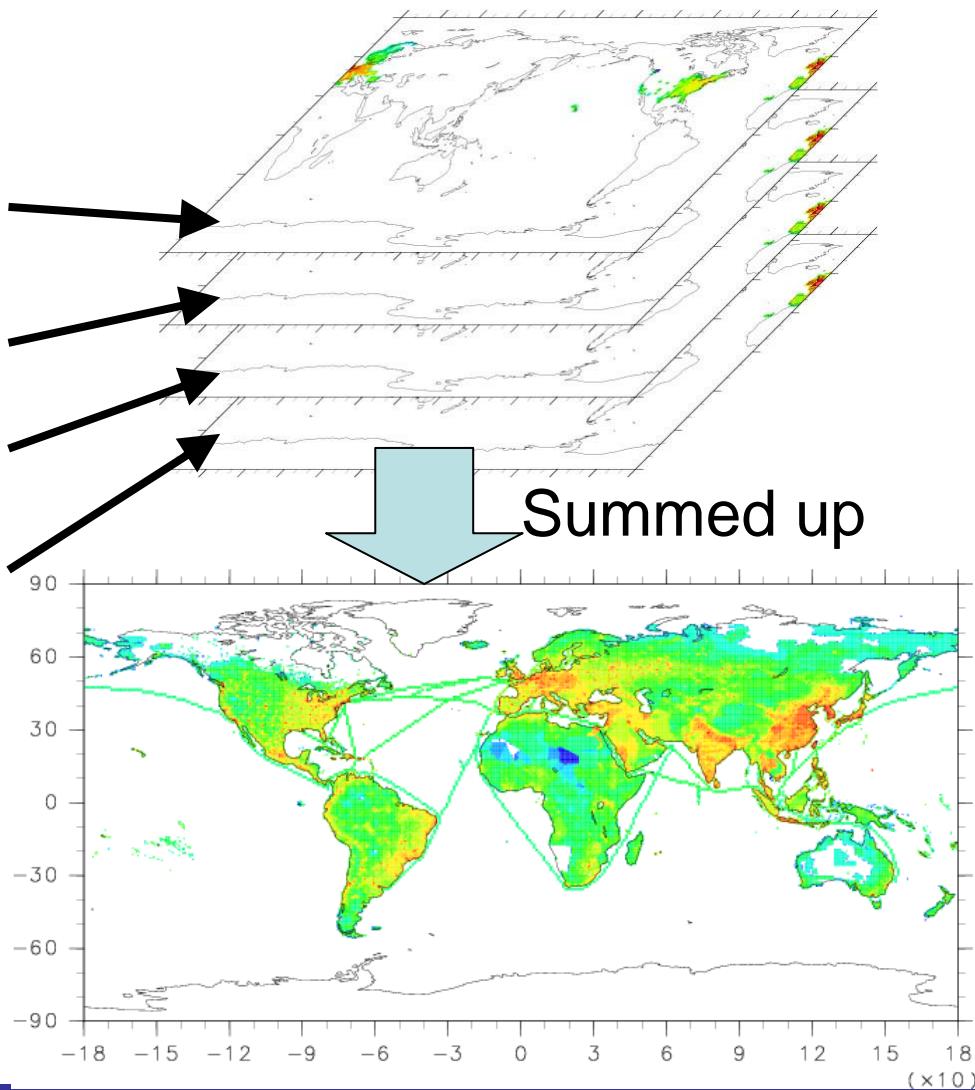

Methods to downscale global scenarios for BC/OC emissions

(Dr. Nozawa and Dr. Ishiwatari)

Sector	Region	Proxy
Electricity and heat	Western Europe	Total population
Electricity and heat	USA	Total population
...
Agriculture	Western Europe	Rural population
...

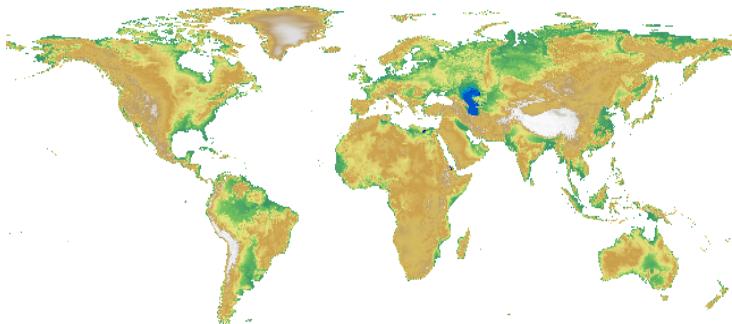

BC/OC emissions are downscaled for each sector and each region using appropriate gridding proxy, and then are summed up.

Downscale of land-use change

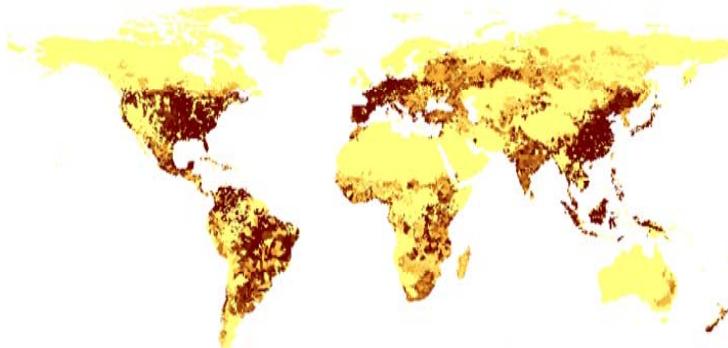

(Dr. Kinoshita)

Geographical data etc.

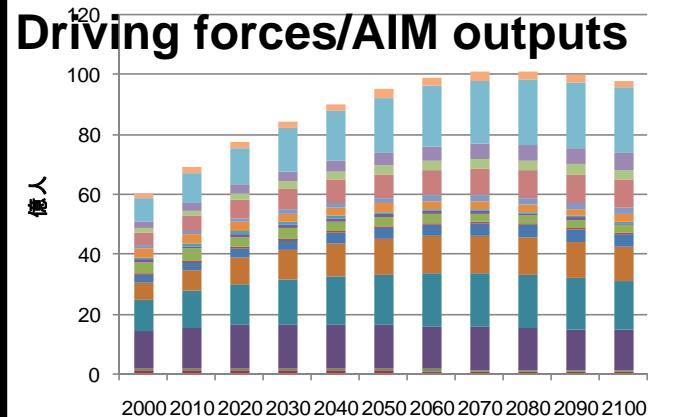

Slope, Elevation
Soil
Meteorological data

Productivity (agriculture)

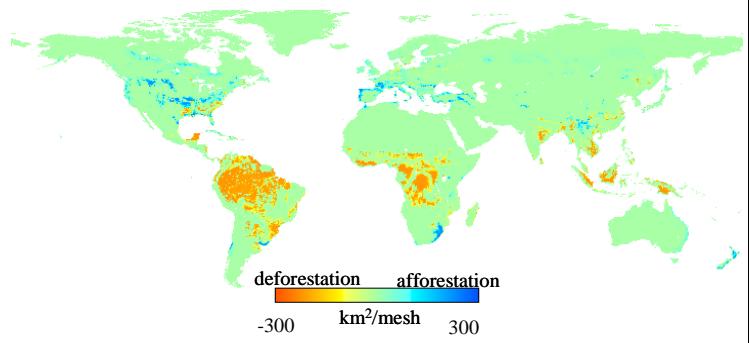

Benefits

Driving forces/AIM outputs

Land use

2. IPCC new scenarios proposed by AIM team

- Last November, we had a training workshop on global model.
- Basic structure
 - Computable general equilibrium model
 - Dataset based on GTAP6inGAMS
 - 25 regions and goods
 - Recursive dynamics from 2001 to 2100
- Features
 - Aggregate household & government into one final demand sector
 - Add more energy supply sectors
 - Modify fossil fuel extraction and trade
 - Modify production function
 - Treated GHGs: same as AIM/Ecosystem for RCP
 - CO₂, CH₄, N₂O, HFC*, PFC*, CFC*, SF₆*, SO_x, BC, OC, CO, NO_x, NMVOC, NH₃
- Refer to Linkage (WB), EPPA (MIT)
- Still I modify the model, benchmark dataset, future scenario...

Definition of sectors

AGR	agriculture
LVK	livestock
FRS	forestry
FSH	fishing
OMN	mining (except fossil fuels)
EIS	energy intensive products
M_M	metal and machinery
OMF	other manufactures
WTR	water
CNS	construction

TRT	transport
CMN	communication
OSG	public service
SER	other service
COA	coal
OIL	crude oil
P_C	petroleum products
GAS	gas
GDT	gas manufacture distribution
ELY	electricity

Definition of regions

JPN	Japan
CHN	China
KOR	Korea
IDN	India
IND	Indonesia
THA	Thailand
XSE	Other South-east Asia
XSA	Other South Asia
AUS	Australia
NZL	New Zealand
XRA	Rest of Asia-Pacific
CAN	Canada

USA	USA
XE15	EU-15 in Western Europe
XE10	EU-10 in Eastern Europe
RUS	Russia
XRE	Rest of Europe
ARG	Argentine
BRA	Brazil
MEX	Mexico
XLM	Other Latin America
XME	Middle East
ZAF	South Africa
XAF	Other Africa

Discussion during this session

- How to proceed the new scenario development
 - What is different from other groups
 - How to quantify the driving forces
 - population
 - GDP
 - technologies
 - resources
 - Who will quantify the scenarios
 - We need your support!
- How to present the new scenario
 - Each team will propose independently
 - Each team concept will be aggregated into “AIM scenario”
