Presentation Outline

1. **Japan's Background**
2. **Our 2050 Vision**
3. **Energy Snap Shot Tool**
4. **AIM Enduse model**
5. **Conclusion**

Japan's Background

1. Population

- ◆ About 120million people
- begin to decrease from 2006

2. GDP

- ◆ About 4500billion US\$ (2005)

3. GHG Emission

- ◆ 338 Mton-C(2004)
- **+7.4%** from 1990, Kyoto Protocol

Statistic GHG Emission

Setting of our visions

- ◆ First step: We make an axis.

Technology “Banzai” society

VS

Communicative life society

- ◆ Based on this axis, we set each characteristics of future image and make two scenario.

Characteristics

	Scenario A (technology)	Scenario B (lifestyle)
Population Distribution	concentrate	disperse
Orientation	market oriented	culture oriented
Ecological Action	high efficiency technology	lifestyle change

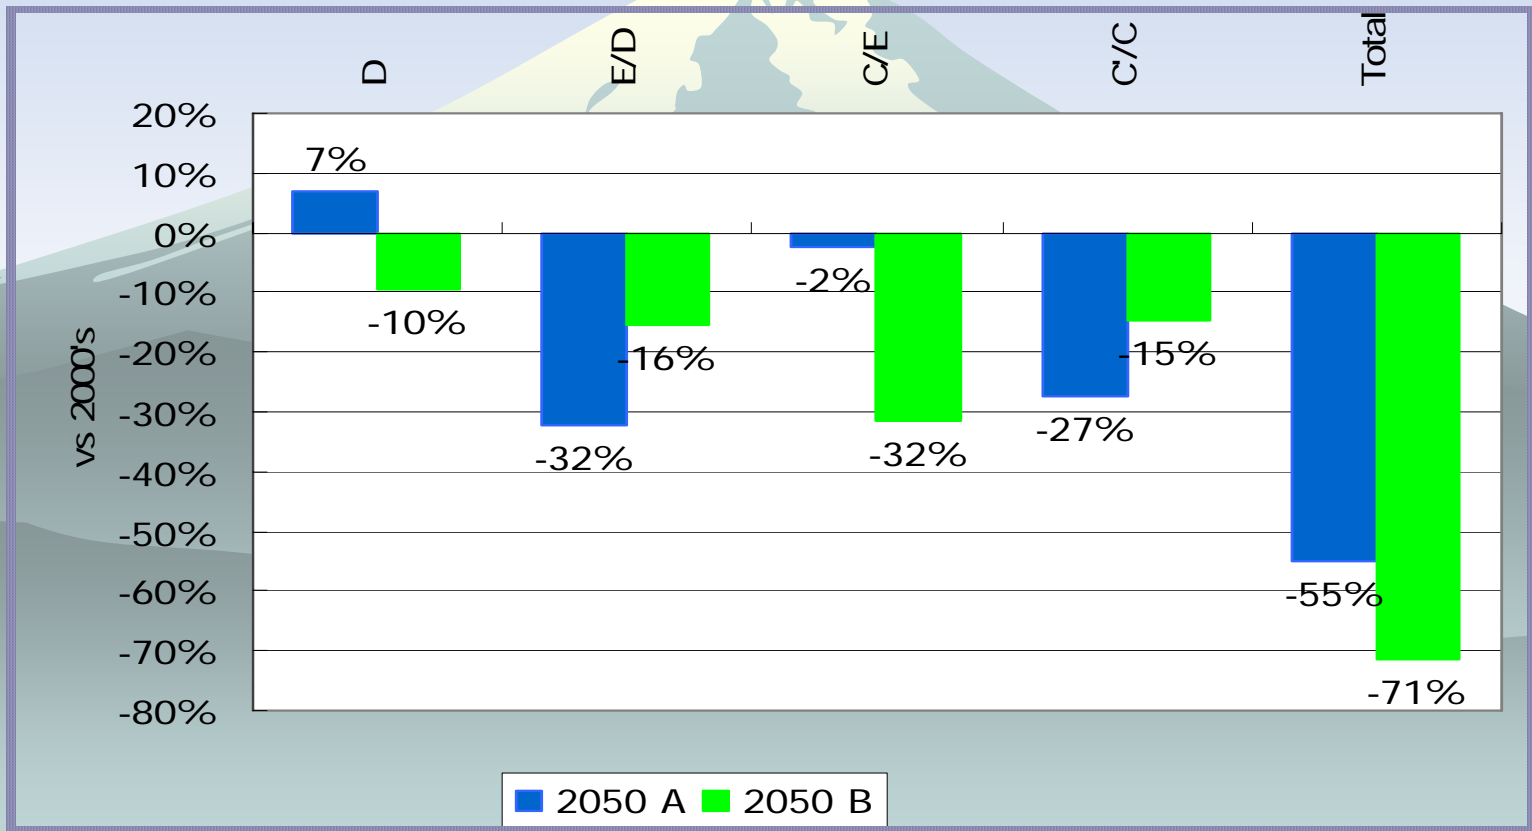

Counter measure case of scenario

	Scenario A	Scenario B
Industry	High investment to R & D	Local production for local consumption
Residential	Frozen foods dominates	Local production for local consumption
Commercial	Tertiary industrialization	Long life-span goods
Passenger transportation	Compact city High density traffic network	Modal shift Intra-area transportation
Freight transportation	Compact city High transportation efficiency Hydrogen vehicle	Modal shift Inter-area transportation

Factor Analysis

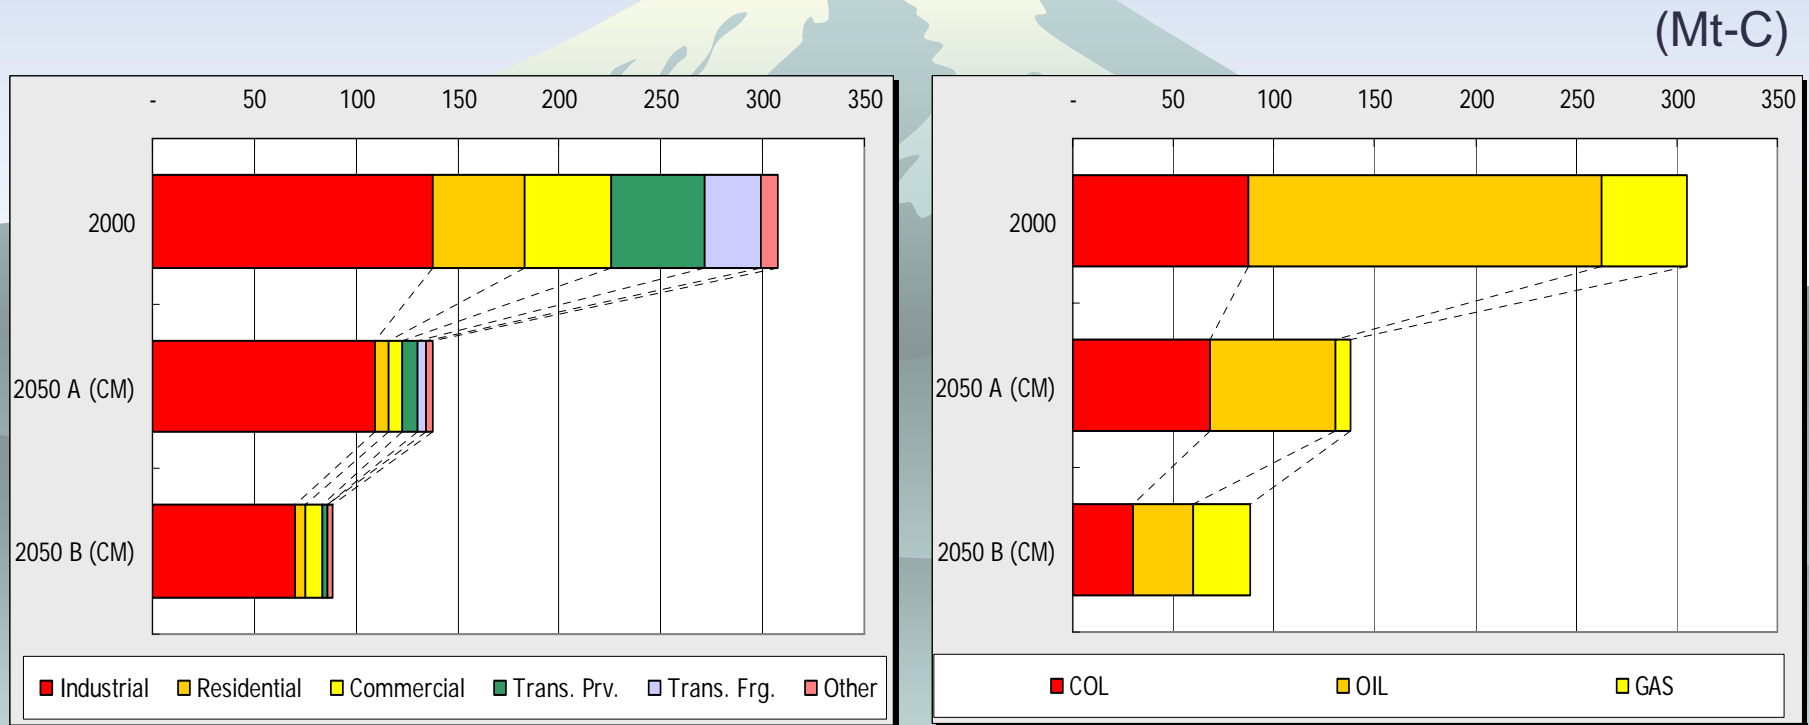

▪ Kaya Identity

$$\frac{\Delta C}{C} = \frac{\Delta D}{D} + \frac{\Delta(E/D)}{(E/D)} + \frac{\Delta(C'/E)}{(C'/E)} + \frac{\Delta(C/C')}{(C/C')} + \text{Crossterm}$$

CO₂ Emission

- Scenario A has to make a more effort for building LCS
- Share of CO₂ emission by Industrial sector relatively increase.

Our assumption for AIM/Enduse model

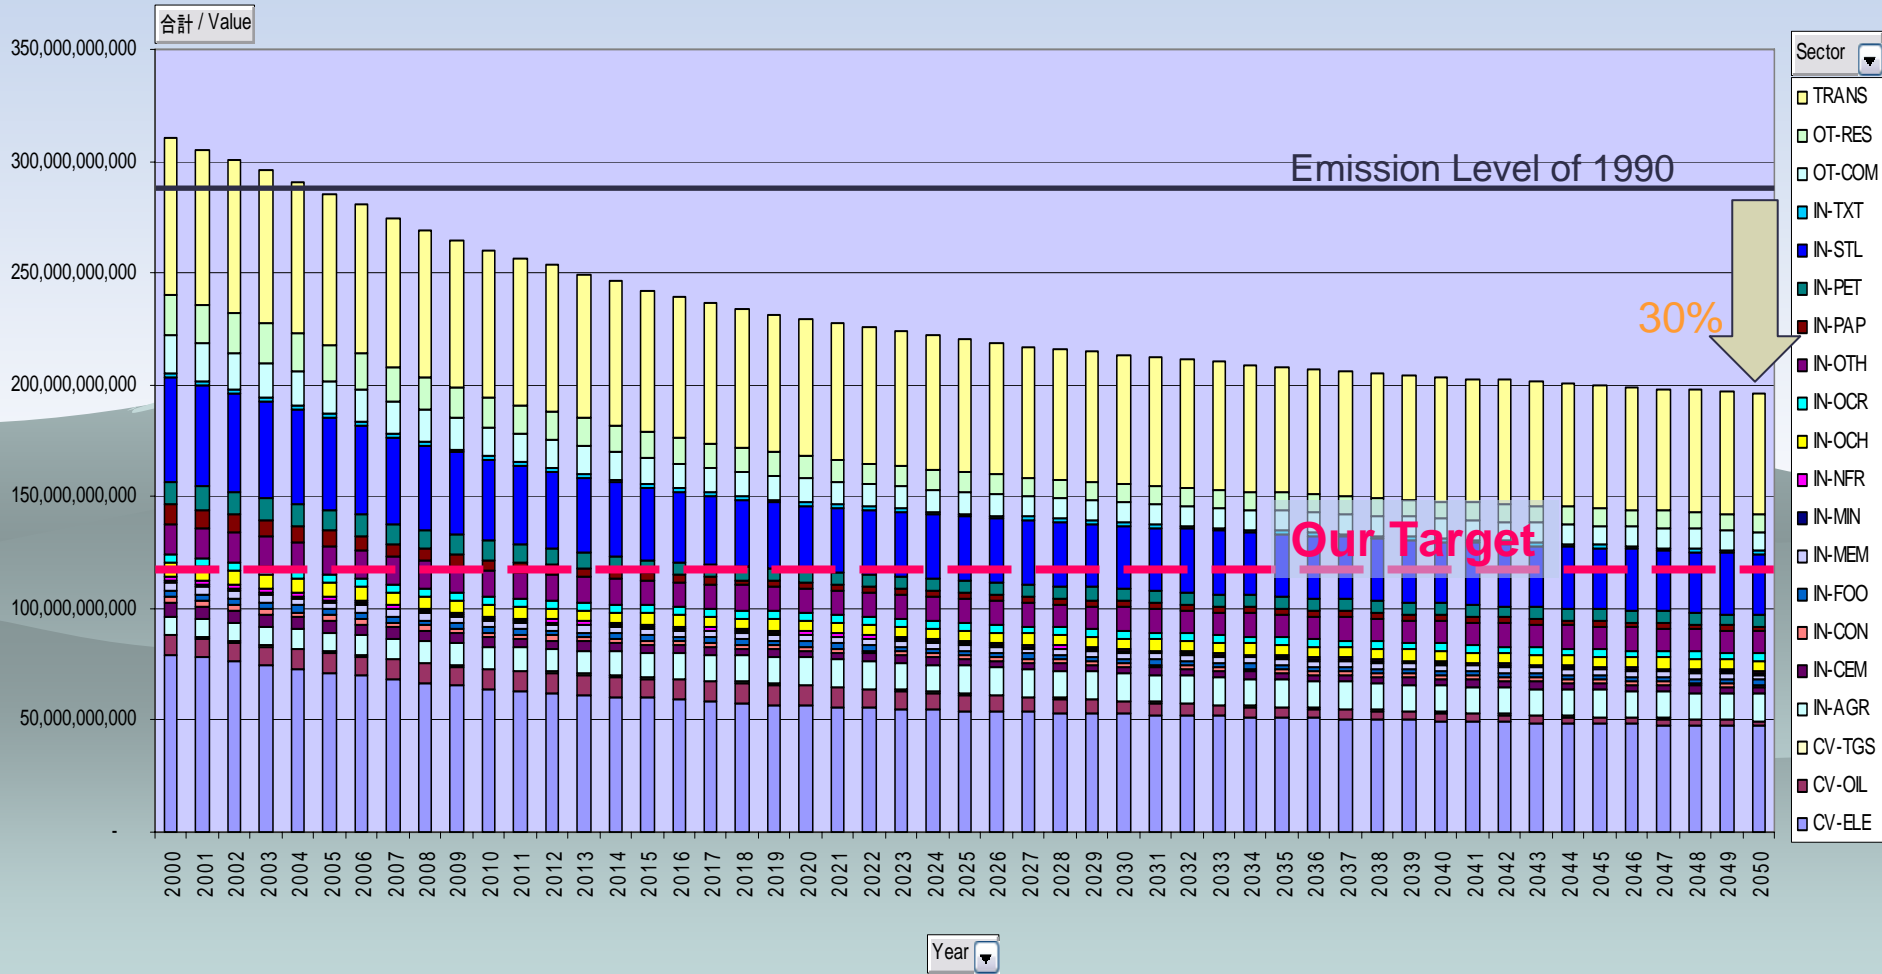

- ◆ Japan's Data (Energy Data, Energy Device Data, Removal Process etc.) has already prepared.
- ◆ We set a service demand by ESS tool and calculate counter measure case by taxation.

Tax rate : Carbon tax	30000¥/t-C(from 2007)
	100000¥/t-C(from 2020)
Energy tax (for Electricity)	500¥/10 ⁸ kcal(from 2007)
	1000¥/10 ⁸ kcal (from 2020)

But we can't change data of Energy Device Improvement.

AIM/Enduse Result of CO2 emission

LPS_Area (すべて) LPS (すべて) Region (すべて) Energy_Device (すべて) Removal (すべて) Item CO2 Kind EMS

Thank you
