

Overall of AIM activities in FY2011 (Session 1)

Toshihiko Masui

National Institute for Environmental Studies, Japan

In this presentation, the overall activities related to the AIM (Asia-Pacific Integrated Model) in FY2011 will be introduced briefly.

- 1) Structure of AIM; The AIM is an integrated assessment model to assess mitigation options to reduce GHG emissions and impact/adaptation to avoid severe climate change damages. (Session 1)
- 2) Global Models; Both AIM/Enduse and AIM/CGE have been contributing to the following activities;
 - a. Publication of RCP (Representative Concentration Pathways) by quantification of 6W/m2
 - b. Discussion on SSPs (Shared Socio-economic Pathways) (Session 7)
 - c. Other model comparisons (EMF, AME, AMPERE, ...) (Session 7)
- 3) Country Models
 - a. Training workshop on CGE (June and November 2011) (Session 7)
 - b. Contribution to national policy making process (Restart of discussion on GHG mitigation target in Japan)
- 4) LCS studies
 - a. Products from Asian countries and cities (Session 2, 3)
 - b. Modeling framework; detailed element models and top-down type models (Session 8)
 - c. SATREPS project (Session 2-4)
- 5) Impact studies (Session 5, 6)

I hope to discuss about the further AIM development and its application toward the low carbon society during the 17th AIM International workshop.
