

Research Activities toward Low Carbon City in Japan

Shuichi Ashina

Senior Researcher / Manager of International Coordination Office

National Institute for Environmental Studies

E-mail: ashina.shuichi@nies.go.jp

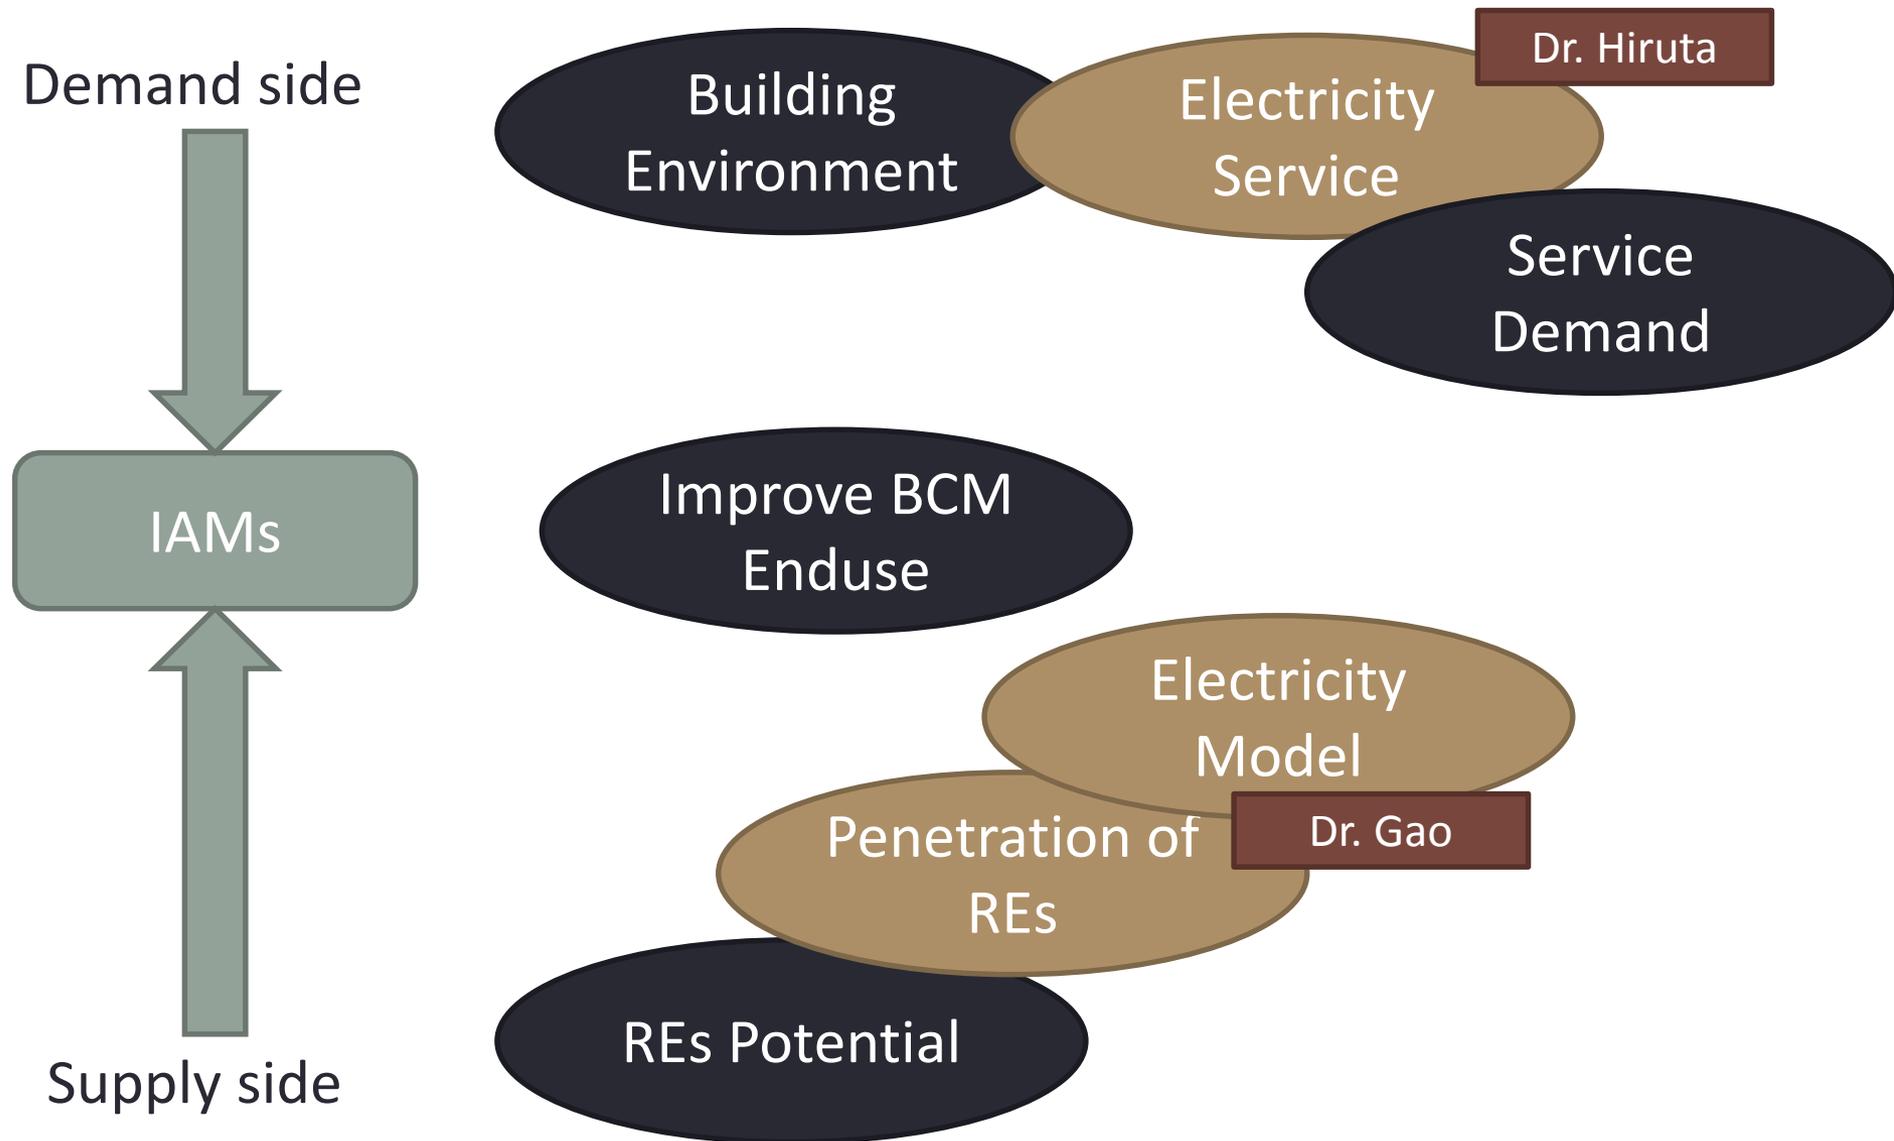

The presentation includes research outcomes from The Environment Research and Technology Development Fund (ERTDF, 2-1711) of Environmental Restoration and Conservation Agency and Ministry of the Environment, Climate Change Adaptation Research Program of NIES, the “Project to Promote CO₂ Technology Assessment (from FY2014-2017)” of Ministry of the Environment, Japan, and JSPS-DG-RSTHE Joint Research Project funded by the Japan Society for the Promotion of Science.

The 24th AIM International Workshop
November 5, 2018 at Ohya Memorial Hall, NIES, Tsukuba, Japan

DEVELOPMENT of Models and Tools

Analysis of Energy Service in Buildings

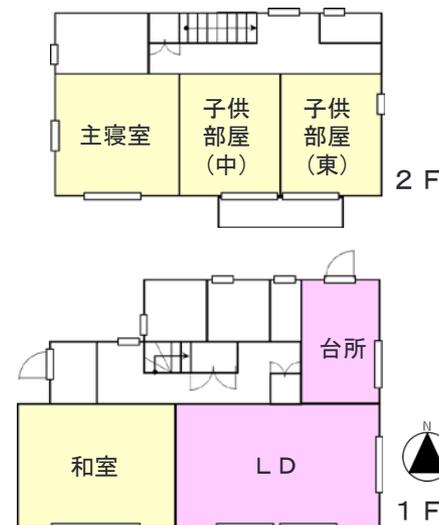

Cooling and heating demand in new/renovated **detached houses and multi-family buildings** are analyzed.

● Assumptions

	Detached	Multi-family
Scale	120.08m ² LDK 29.81m ² Other area 51.35m ²	70.00m ² LDK 24.23m ² Other area 29.75m ²
Structure	Wood	RC
Installed System	Cooling: Airconditioner Heating: FF heater or Airconditioner	

Floor Map (Assumption)

【戸建住宅 概要図】

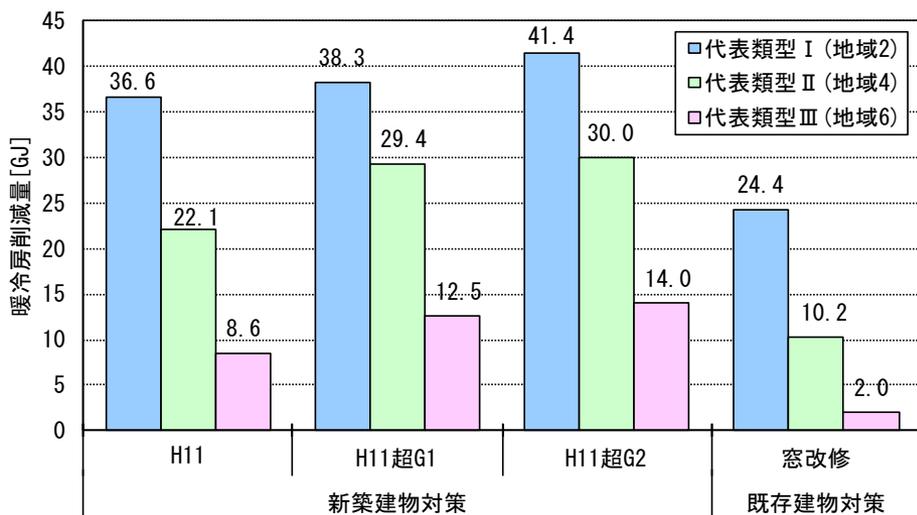

【集合住宅 住戸概要図】

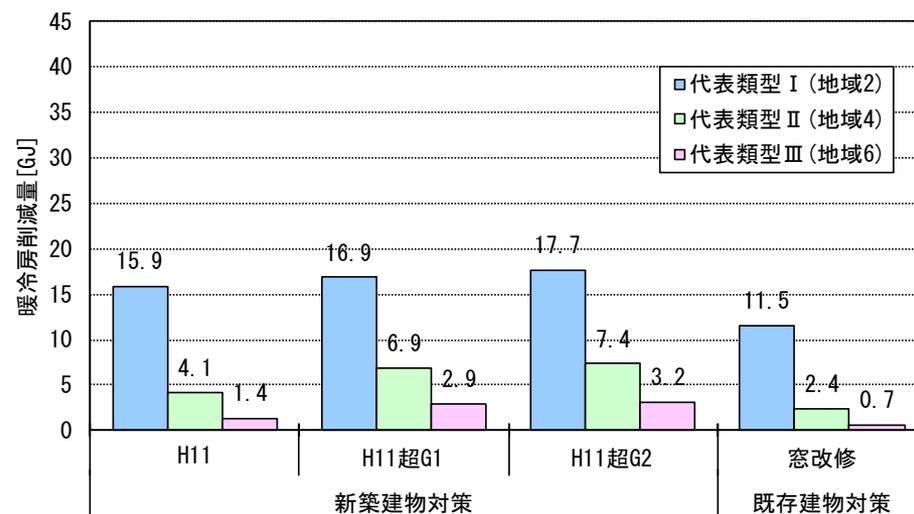

Results: Impacts of Insulation on S55 level

- Reduction in Hokkaido is larger than other areas.
- Impacts on multi-family buildings are less than that on detached due to area of outer wall.
- Shielding film leads to reduction in cooling demand but increase in heating.

● Results in Detached houses

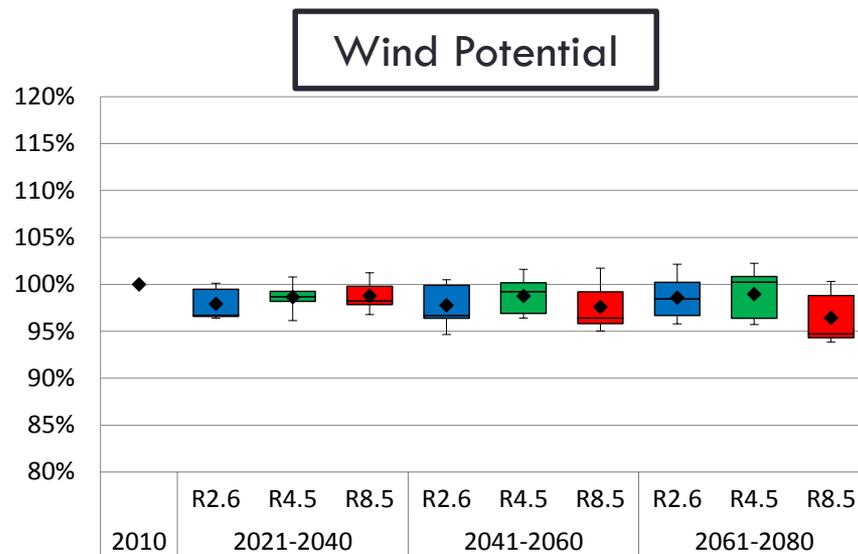

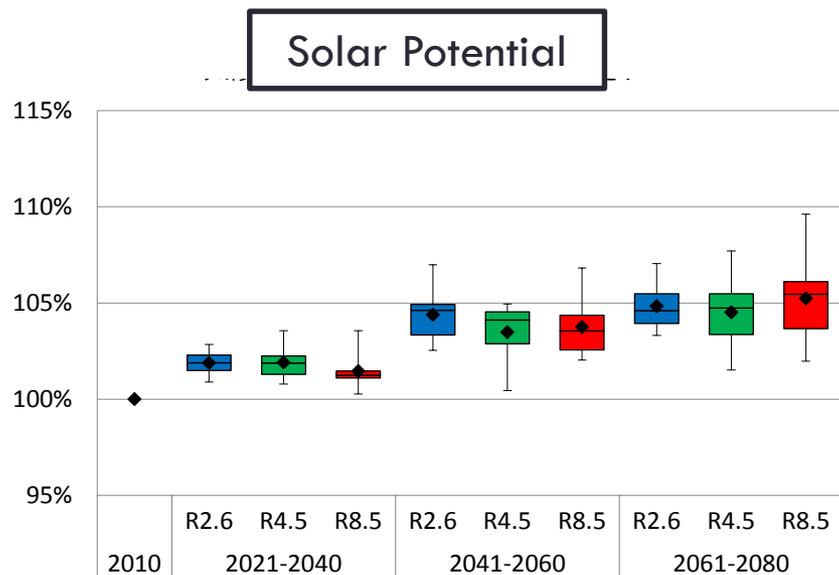

● Results in Multi-family building (intermediate story)

I: Hokkaido, II: Fukushima, III: Kitakyushu

Climate Change affects Solar and Wind Outputs Renew-able but Vari-able over the Period

- Solar potential tends to increase from current level.
- Wind potential may decrease over the period even in RCP2.6 scenario.

7 GCMs are used for future climate change: GFDL-CM3, GFDL-ESM2M, IPSL-CM5A-LR, HadGEM2-ES, MIROC-ESM-CHEM, MIROC5, MRI-CGCM3.0

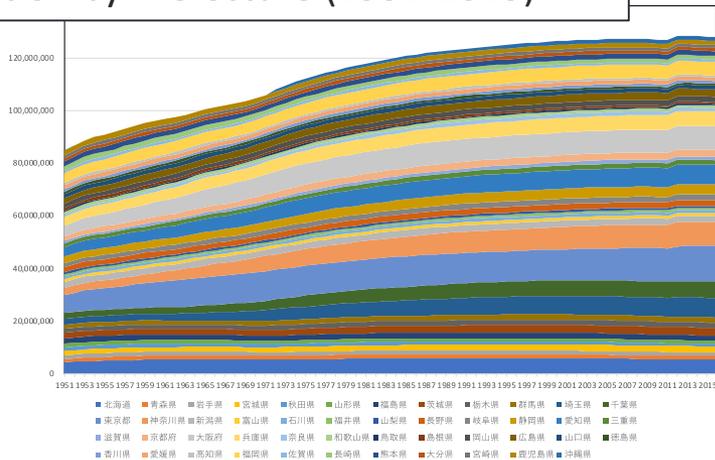

Regional climate information created by downscaling.

Target area: Fukushima Prefecture, 1km resolution DEM

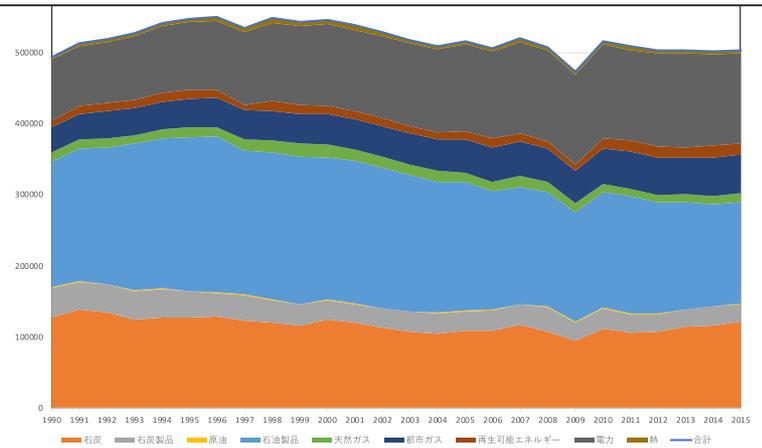

DATABASE Architecture

- Statistical data of socio-economic data has been collected by prefecture/municipality.

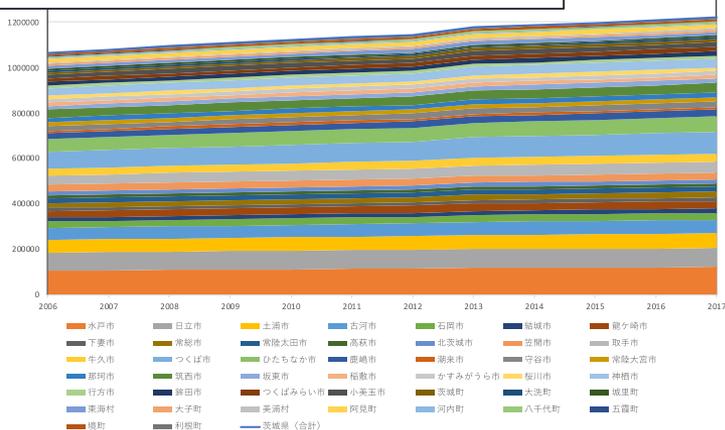

Population by Prefecture (1951-2015)

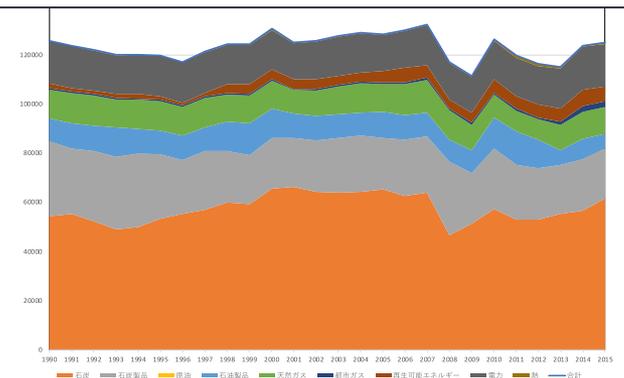

Energy Consumption in Fukuoka (1990-2015)

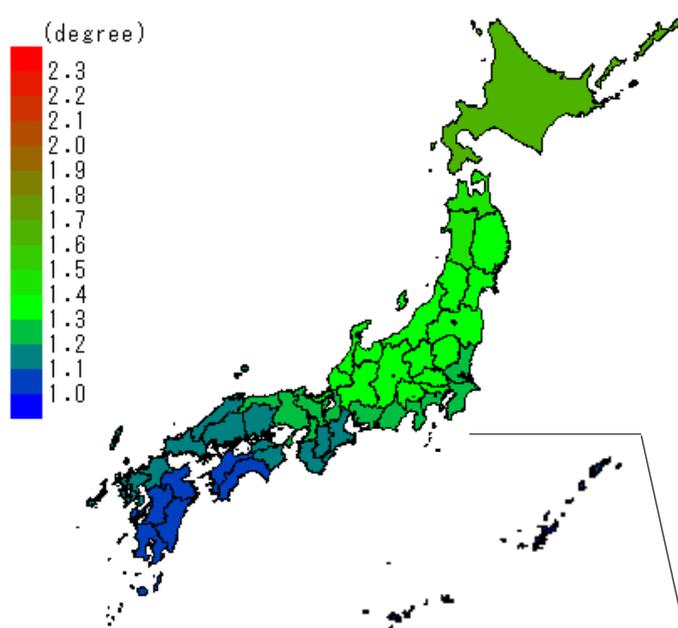

Households in Ibaraki (2006-2017)

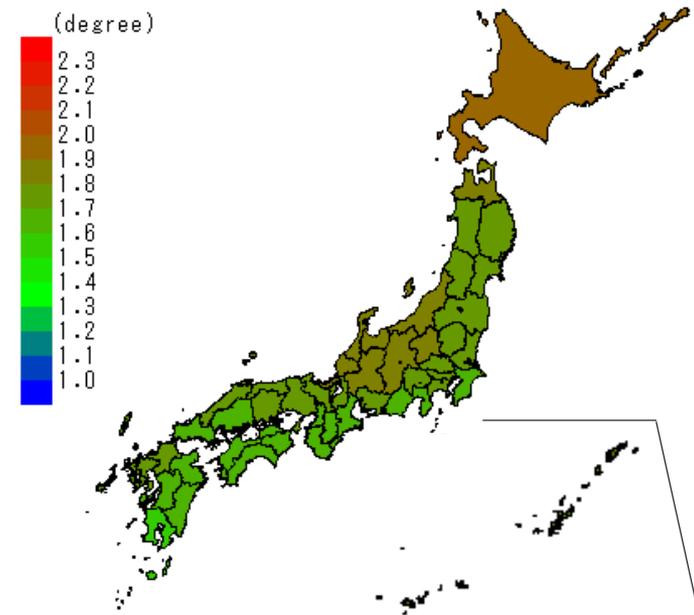

Energy Consumption in Steel Industry of Fukuoka (1990-2015)

Temperature change by Prefecture

Temperature change in 2030
(MIROC5, average of RCP2.6)

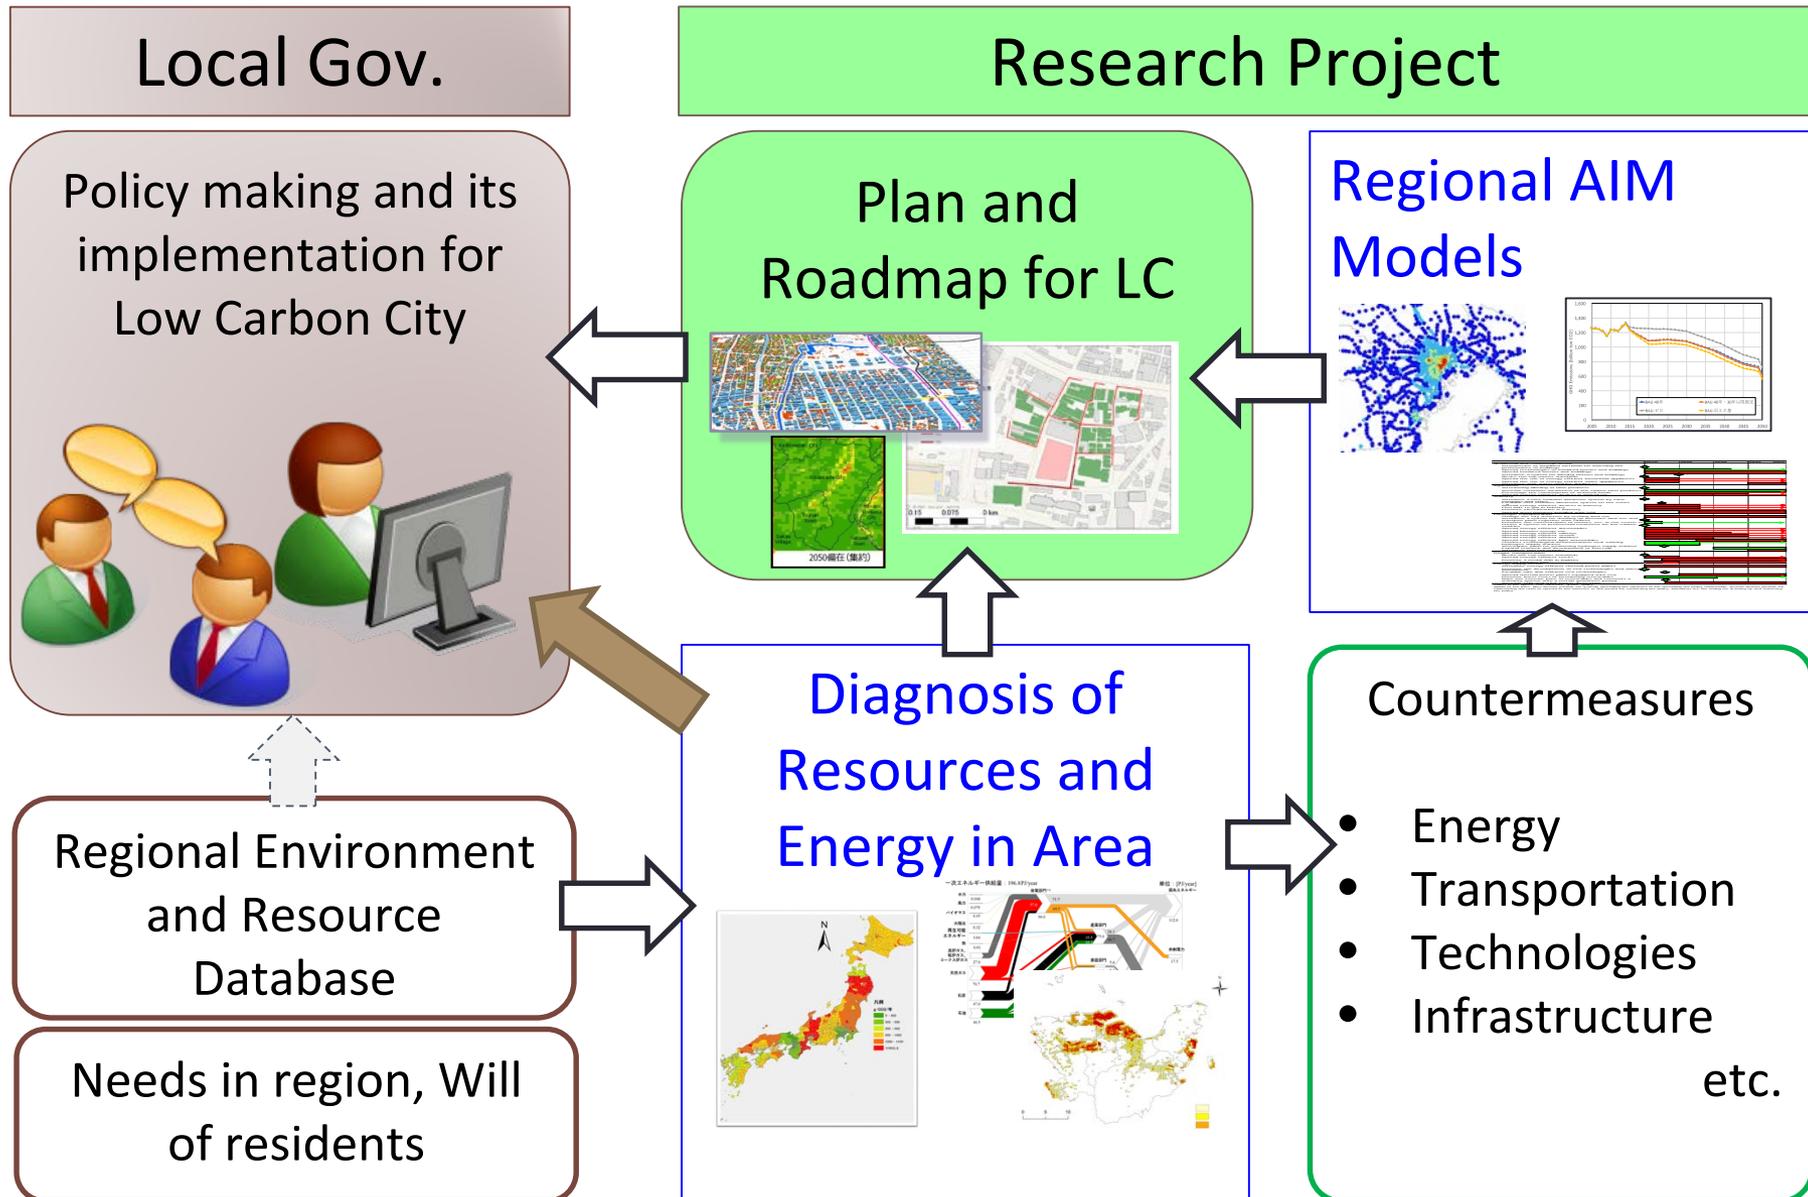

Temperature change in 2050
(MIROC5, average of RCP2.6)

■ Temperature change (ΔT)

[°C]

	都道府県	MIROC5			MRI		
		rcp2.6	rcp4.5	rcp8.5	rcp2.6	rcp4.5	rcp8.5
2030年 (2021-2040年の平均値)	北海道	1.68	1.71	1.35	0.58	1.04	0.95
	福島県	1.34	1.34	1.22	0.33	0.60	0.64
	福岡県	1.13	1.03	1.20	0.38	0.54	0.65
2050年 (2041-2060年の平均値)	北海道	1.98	2.26	2.69	0.97	1.55	1.88
	福島県	1.75	1.94	2.41	0.68	1.27	1.31
	福岡県	1.72	1.69	2.31	0.68	1.28	1.32

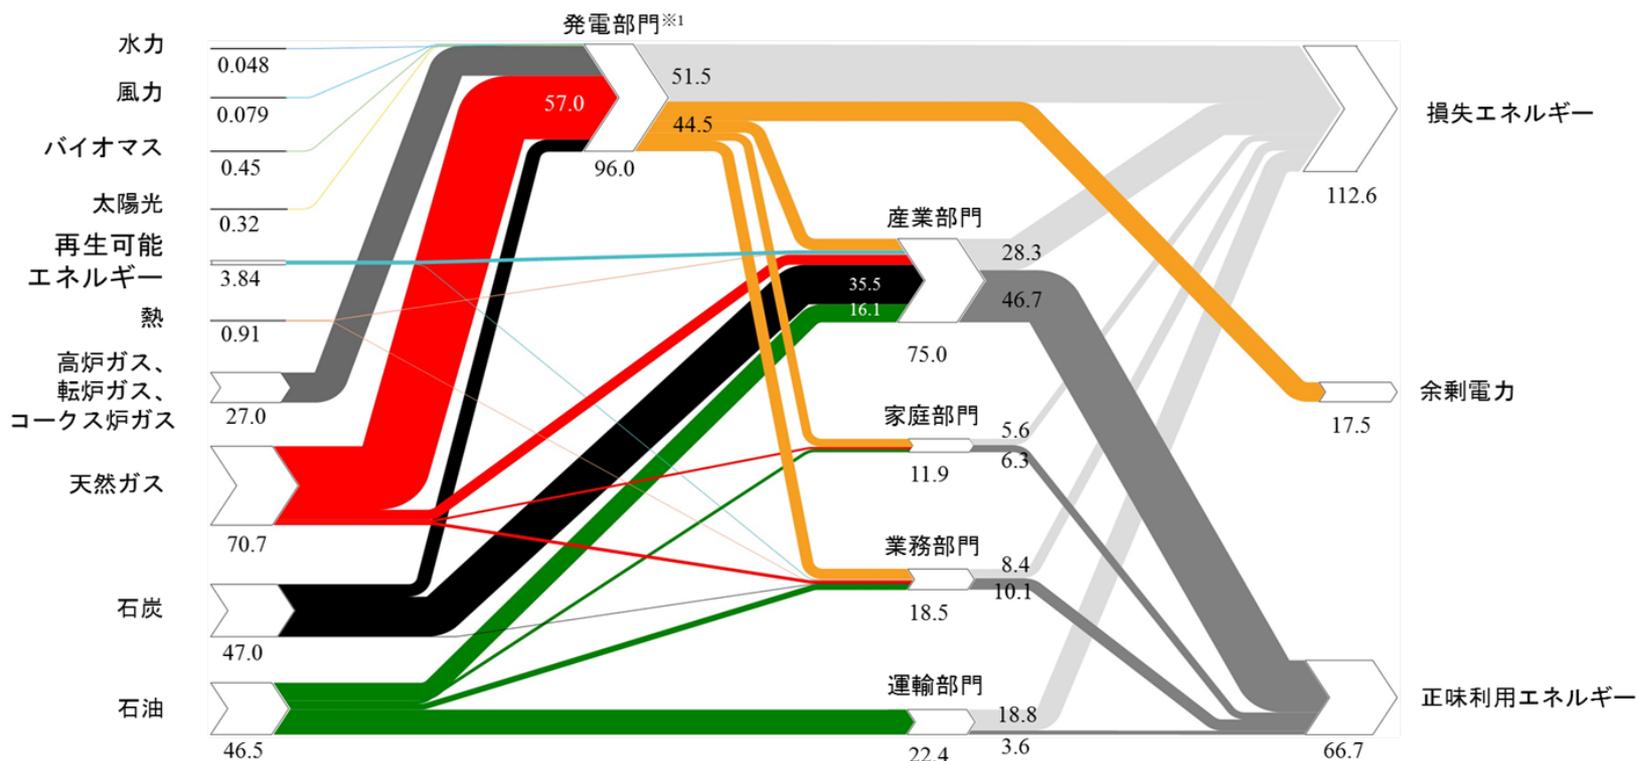

DIAGNOSIS of Area

Energy Flow in Kitakyushu

一次エネルギー供給量：196.8PJ/year

単位：[PJ/year]

Low Carbon City Planning with Climate Change Risk Management

- City planning may adjust with consideration for regional climate change risk, such as flood, landslides and tsunami.
- Take risk or avoid risk?

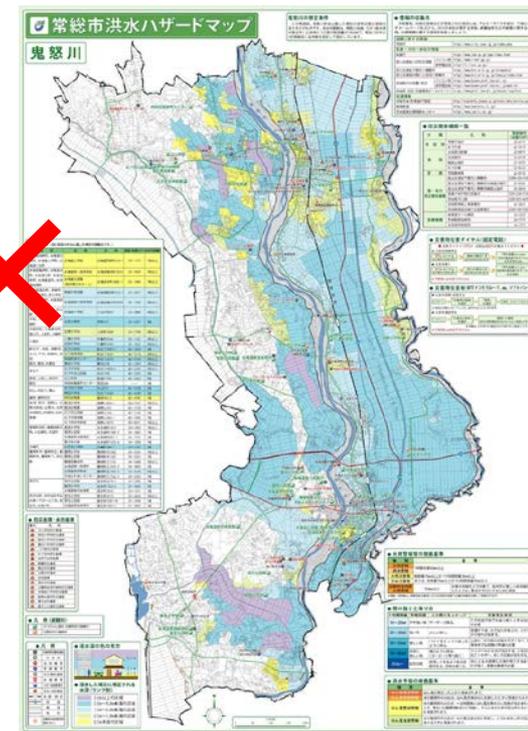

City Planning

Renewable Potential

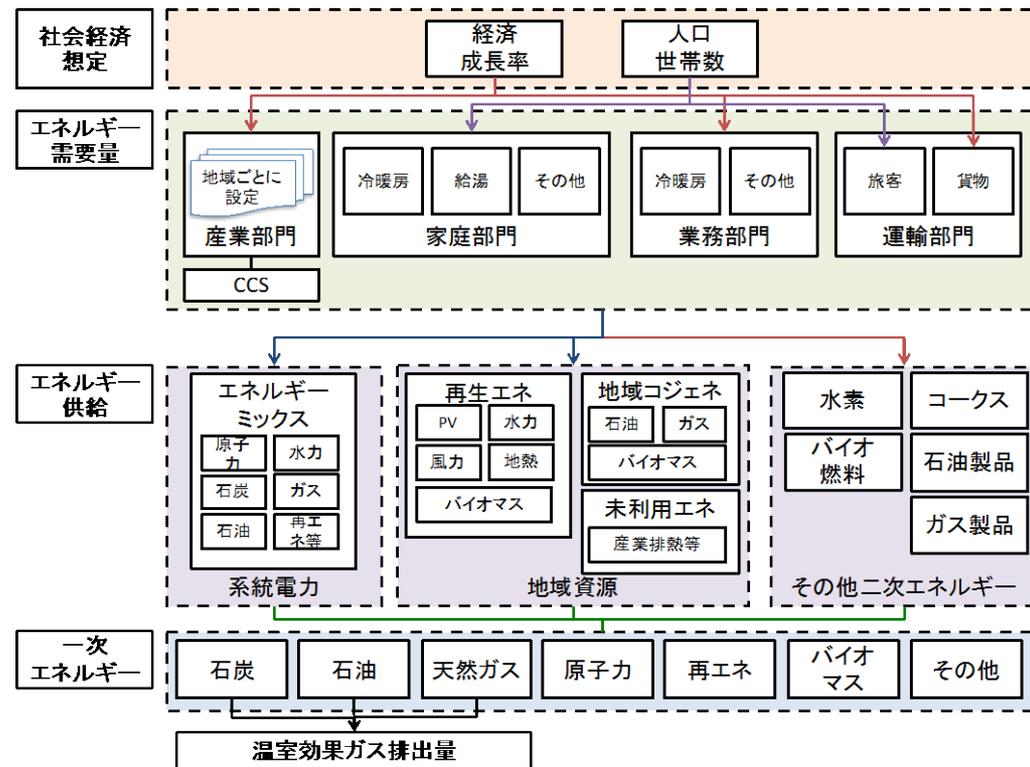

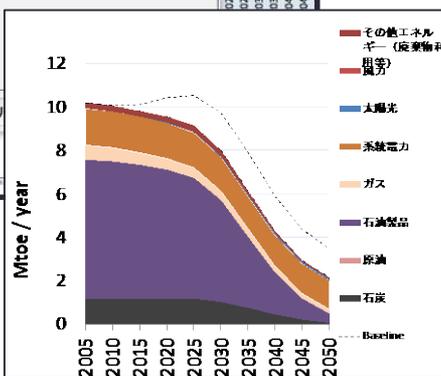

Risk of Flood

DISSERMINATION of Tools and Results

- Excel-based tool for regional Low Carbon Scenario Analysis has been developed.
- Trial experiment has been conducted in Kawasaki Workshop with citizens, businesses and city council members.

Overview of Tool and Trial WS

Structure of Regional Tool

Current Research Questions

(1) What is National/Regional Targets and Actions towards the SDGs in Asia?

(2) How to Design Roadmaps/Pathways towards the SDGs at Regional Scale?

Sustainable Society

Now

2015 2020 2030 2040 2050

(3) How to Monitor Progresses and Impacts of Actions (or MRV for Actions) towards the SDGs?

(4) How to Integrate (1) to (3), and the Role of S&T
